**DEPARTMENT OF THE AIR FORCE
AIR NATIONAL GUARD
MILITARY CONSTRUCTION PROGRAM FOR FISCAL YEAR 2008**

SECTION I

APPROPRIATIONS LANGUAGE

For construction, acquisition, expansion, rehabilitation, and conversion of facilities for the training and administration of the Air National Guard, and contributions therefore, as authorized by Chapter 1803 of Title 10, United States Code, and Military Construction Authorizations Acts, \$85,517,000 to remain available until September 30, 2012.

SPECIAL PROGRAM CONSIDERATIONS

Environmental Compliance

The environmental compliance projects proposed in this program are necessary to correct current environmental noncompliance situations and to prevent future noncompliance.

Flood Plain Management and Wetland Protection

Proposed land acquisitions, disposals, and installation construction projects have been planned in accordance with the requirements of Executive Orders 11988, Flood Plain Management, and 11900, Protection of Wetlands. Projects have been sited to avoid long and short-term adverse impacts, reduce the risk of flood losses, and minimize the loss, or degradation of wetlands.

Design for Accessibility of Physically Handicapped Personnel

In accordance with Public Law 90-480, provisions for physically handicapped personnel will be provided for, where appropriate, in the design of facilities included in this program.

Preservation of Historical Sites and Structures

Facilities included in this program do not directly or indirectly affect a district, site, building, structure, object, or setting listed in the National Register of Historic Places, except as noted on the DD Form 1391s.

Environmental Protection

In accordance with Section 102(2) (c) of the National Environmental Policy Act of 1969 (PL 91-190), the environmental impact analysis process has been completed or is actively underway for all projects in the Military Construction Program.

Economic Analysis

Economics are an inherent aspect of project development and design of military construction projects. Therefore, all projects included in this program represent the most economical use of resources.

SPECIAL PROGRAM CONSIDERATIONS
(continued)

Reserve Manpower Potential

The reserve manpower potential to meet and maintain authorized strengths of all reserve flying/non-flying units in those areas in which these facilities are to be located has been reviewed. It has been determined, in coordination with all other Services having reserve flying/non-flying units in these areas, that the number of units of the reserve components of the Armed Forces presently located in those areas, and those which have been allocated to the areas for future activation, is not and will not be larger than the number that reasonably can be expected to be maintained at authorized strength considering the number of persons living in the areas who are qualified for membership in those reserve units.

Potential Use of Vacant Schools and Other State and Local Facilities

The potential use of vacant schools and other state and local owned facilities has been reviewed and analyzed for each facility to be constructed under this program.

Construction Criteria Manual

Unless otherwise noted, the projects comply with the scope and design criteria prescribed in Part II of Military Handbook 1190, "Facility Planning and Design Guide."

10. Description of Proposed Construction: Comprehensive renovation with alteration and rearrangement of interior walls, floors to include raised flooring, ceilings, electrical and plumbing systems, and fire detection systems. Modify heating, ventilation, and air conditioning ducting and replace air handlers and chillers as necessary. Provide for Sensitive Compartmented Information Facility (SCIF) areas to include secure walls, ceiling, and door and alarm systems. Install a fire protection system. Remove exterior windows as necessary and replace openings with material to match building exterior. Provide anti-terrorism/force protection measures to include road and parking relocation as well as other necessary measures. Provide security fencing. Provide exterior support such as pavements, utility and communications extensions, and site improvements. Install standby power generators with auto-start, switch gear, and uninterrupted power supply. Manpower supported: 356 Air Conditioning: 1,050 KW.				
11. REQUIREMENT: 3,094 SM ADEQUATE: 0 SM SUBSTANDARD: 3,094 SM PROJECT: DGS Beddown (New Mission) REQUIREMENT: The base requires an adequately sized and appropriately configured space for the establishment of a new mission Digital Ground Station (DGS) and its beddown in an initial operating capability (IOC) facility. A DGS receives classified data in real time, processes the data, and transmits the results to customers for mission employment activities. Both operational missions and training activities for assigned ANG personnel will be conducted in the facility. Functional requirements include: operational space for data receipt, processing, and retransmission by on-duty crews working shift operations; analysis areas; equipment operations, maintenance, and storage areas; maintenance work stations; and administrative support and command areas. Operations space must be accommodated in a Sensitive Compartmented Information Facility (SCIF) large enough to initially accommodate up to 14 intelligence data terminals/work stations as required for the daily production of

10. Description of Proposed Construction: Reinforced concrete foundation and floor slab with steel framed masonry walls and roof structure. The vehicle storage area to be a 3-sided metal shed with access pavements and utilities. Alteration: rearrange and extend interior walls and utilities to functionally fit the addition. Provide exterior utility support including minimum AT/FP. Manpower supported: 73. Air Conditioning: 140 KW.				
11. REQUIREMENT: 3,252 SM ADEQUATE: 3,112 SM SUBSTANDARD: 139 SM <u>PROJECT:</u> Upgrade AOS Facility (New Mission) <u>REQUIREMENT:</u> Camp Beauregard is a State of Louisiana operated installation for training of the Army National Guard. The ANG's 122nd ASOS unit at Camp Beauregard supports the 256th and 56th Brigade Combat Teams of the Army National Guard. The unit requires additional vehicle storage area and minor additions to accommodate the additional vehicles being provided. <u>CURRENT SITUATION:</u> The ANG-operated ASOS complex has inadequate storage for the authorized HMMVV fleet. The unit is authorized 1,394 SM of vehicle storage, but has only 372 SM. Additional minor storage space deficit exists in the operations and shop area. Each HMMWV is fully equipped with radios and other sensitive communications gear. These items are stored in the vehicles to make them ready for training on UTA. Without adequate covered storage vehicles and equipment degrade prematurely. <u>IMPACT IF NOT PROVIDED:</u> The HMMWV vehicle fleet will have to be stored outside in the elements, thus damaging the radios and other equipment installed in the vehicles. Unit readiness and ability to perform deployed mission will be degraded. Support to Army National Guard units/training will be severely limited. <u>ADDITIONAL:</u> This project meets the criteria/scope specified in Air National Guard Handbook 32-1084, "Facility Requirements" and is in compliance with the base master plan. Antiterrorism/Force Protection requirements have been considered in the development of this project. This facility can be

10. Description of Proposed Construction: Comprehensive interior renovation to include internal reconfiguration, ceiling, wall, and floor coatings and finishes, and electrical system reconfiguration. Repair second floor mezzanine as needed. Provide for security alarm systems, fire suppression and detection, raised flooring or other cabling system, electrical switch gear, standby power, and uninterrupted power supply systems. Provide allied support for communications requirements and system upgrades. Site work includes facility access, alarm systems and utility extensions and connections. This facility requires certification as a Sensitive Compartmented Information Facility (SCIF) and requires all work as necessary to accommodate SCIF criteria. Air Conditioning: 350 KW.				
11. REQUIREMENT: 2,117 SM ADEQUATE: 1,373 SM SUBSTANDARD: 743 SM PROJECT: DGS IOC Bed Down (New Mission) <u>REQUIREMENT:</u> The base requires an adequately sized and appropriately configured space for the establishment of a new mission Digital Ground Station (DGS) and its beddown in an initial operating capability (IOC) facility. A DGS receives classified data in real time, processes the data, and transmits the results to customers for mission employment activities. Both operational missions and training activities for assigned ANG personnel will be conducted in the facility. Functional requirements include: operational space for data receipt, processing, and retransmission by on-duty crews working shift operations; analysis areas; equipment operations, maintenance, and storage areas; maintenance work stations; and administrative support and command areas. Operations space must be accommodated in a Sensitive Compartmented Information Facility (SCIF) large enough to initially accommodate up to 14 intelligence data terminals/work stations as required for the daily production of classified intelligence information as well as sufficient training work space, complete with stand by power, switch gear, and uninterrupted power supply. This project supports initial bed down ultimately for 160 ANG/10 contractor personnel full time. <u>CURRENT SITUATION:</u> Through Total Force Integration initiatives, the base has been selected to receive a DGS function as a new mission beddown. Use of existing facilities can accommodate the interim beddown of this mission so that it can achieve IOC. Building 165 was constructed in 1990 as a squadron operations complex and is currently used as such until assigned F-15 aircraft are relocated as part of a Base Realignment and Closure initiative. The facility has three SCIF/vault areas - the current

10. Description of Proposed Construction: Reinforced concrete foundation and floor slab with spread footings and engineered fill, brick masonry exterior, masonry walls, gypsum and steel stud partition walls, fixtures and hardware, mechanical and plumbing, electrical, standing seam metal roof, utilities, general site preparation, pavements, landscaping, communications, fire protection and force protection measures. Also includes covered vehicle wash rack. Air Conditioning: 263 KW.				
11. REQUIREMENT: 3,217 SM ADEQUATE: 0 SM SUBSTANDARD: 0 SM <u>PROJECT:</u> ASOS Beddown (New Mission) <u>REQUIREMENT:</u> Fort Indian Town Gap ANG Station requires adequately sized and properly configured permanent facilities for the beddown of a new Air Support Operations Squadron (ASOS). The mission of the ASOS is to train and deploy with Army Units and direct air support and cover; establishing vital links between ground forces and aircrew members providing close air support. The mission requires an adequately sized and properly configured facility to support mission command and control, mission training, radio and vehicle maintenance, weapons storage, planning and administration support. The storage shed is required to house 24-each HMMWV vehicles. This ASOS trains with the Army National Guard units at the range and supports the 28th ID, the 2nd and the 56 SBCT. The manpower supported by this unit is 73. <u>CURRENT SITUATION:</u> A site survey performed in the spring of 2006 indicated properly configured facilities to support the ASOS are not available at Fort Indian Town Gap ANG Station. ASOS must bed down in shared use space, with overcrowding, lack of training effectiveness, mission degradation, and inability to deploy as the ultimate results. Sensitive electronic gear, including aircraft-style radios and computer equipment, will be stored outdoors in canvas-topped HMMWV vehicles, which will allow premature failure due to moisture and weather exposure. <u>IMPACT IF NOT PROVIDED:</u> The ASOS unit is not able to perform the required mission with out properly configured facilities. Command and control, mission planning, training of personnel, radio

10. Description of Proposed Construction: Roadwork with earthwork, utility relocation, constructed sub-base, bituminous asphalt sub base, binder, final surfacing, drainage structures, signage, utility relocation, and traffic striping. Small scale facility work will include foundations, mechanical, electrical and communication systems, walls, roofs, pavements and canopies. Air Conditioning: 18 KW.				
11. REQUIREMENT: AS REQUIRED. <u>PROJECT:</u> MILSTAR Beddown - Relocate Main Base Entrance Road (New Mission) <u>REQUIREMENT:</u> The 134th Air Refueling Wing (ARW) requires adequate force protection measures to support a 12-PAI, KC-135 unit and associated strategic unit with MILSTAR capability. When operational, the MILSTAR has a required Protection Level of PL1, which drives additional security requirements at the site. To meet anti-terrorism and force protection measures (AT/FP), the main entrance road must be relocated and a new base entrance must be established to provide proper stand off distance, adequate queuing lanes, inspection areas, and pass and ID functions, while consolidating separate cantonment areas into one base. <u>CURRENT SITUATION:</u> Located outside the main cantonment area of McGhee Tyson Air National Guard Base, the 119th Comand and Control Squadron (CACS) operates specialized electronic and telecommunications systems for United States Strategic Command. New mission directives require the 119th and related space mission systems to be classified as a PL1 priority resource, elevating security requirements. Currently, security forces must travel off Air Force property through the existing main entrance of the current cantonment area to provide force protection for the 119th and related DOD components. In addition, the site occupied by the 119th CACS does not adequately meet perimeter stand off distances. The perimeter stand off distances radiate from transmission equipment to provide additional security and in some instances a secondary need exists for signal radiation clearance. To decrease security risk and meet stand off distances, the existing public road adjacent to the area occupied by the 119th CACS will be relocated. A new road will be constructed to divert public traffic to the North, converting the existing road into an internal base road. This will create a single, fenced

3. INSTALLATION AND LOCATION MCGHEE TYSON IAP, TENNESSEE		
5. PROJECT TITLE MILSTAR BEDDOWN- RELOCATE BASE ACCESS ROAD	7. PROJECT NUMBER PSXE069161	
<p>cantonment area. The main gate and associated functions will be moved to the East, opposite its current location on a county road, creating a single entry point for all DOD functions at McGhee Tyson Airport. In addition to improving security for the 119th, the main base will now meet AT/FP criteria, improving the overall security for members of the 134th AW. The main gate deficiency was identified by the ANG vulnerability assessment team (VAT) inspection as "Serious".</p> <p><u>IMPACT IF NOT PROVIDED:</u> The current configuration of base facilities increases vulnerabilities, exposing the base populace to greater risk and requiring additional resources to meet security requirements for PL1 resources. Facilities and people will be exposed to greater risk from a range of potential threats possibly directed against the installation and high priority systems will be vulnerable to direct attack. The 119th CACS carries the highest degree of security risk, located in an extremely vulnerable location. In addition, current problems with the existing main gate entrance related to AT/FP measures and general access vulnerabilities continue to put DOD personnel at risk. Operationally, the impact will be manifested in higher cost to provide manpower and equipment dictated by the need to protect two separate sites and vulnerable priority resources.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Air National Guard Handbook 32-1084, "Facility Requirements" and is in compliance with the base master plan. All known alternative options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed. Antiterrorism/Force Protection requirements have been considered in the development of this project. Mission requirements, operational considerations and location are incompatible with use by other components.</p>

10. Description of Proposed Construction: Provide wear surface an all new roads/parking and upgrade existing roadways by removing deteriorated pavements and replacing with bituminous pavements. Install roadway lighting, provide necessary site improvements, install base signage and provide communication duct bank to match existing system. Provide security fencing around the aircraft parking apron. Improve the drainage system by extending the culverts and drainage ditches. Provide blast fences and noise mitigation measures.				
11. REQUIREMENT: As Required. <u>PROJECT:</u> C-5 Final Infrastructure Support (New Mission). <u>REQUIREMENT:</u> The 164th Airlift Wing requires properly phased and constructed infrastructure to support an 8-PAI, C-5 unit. To align appropriation with construction over a 4 year period in conjunction with infrastructure elements provided by the Memphis-Shelby County Airport Authority (MSCAA), infrastructure projects were appropriately phased. The final elements of that infrastructure includes serviceable pavement for parking lots for operational and privately owned vehicles. Other site development elements include flightline security fencing and access control gates, noise mitigation, secondary base entry access control, controlled area checkpoints, pedestrian walkways, sidewalks, and entryway area lighting, directional and building locator signage, landscaping and hardscaping. The roadways being provided in support of the new portion of the base have only a base course during the initial period of construction and require a wear surface to complete the roadways. These required elements support construction of the new proposed facilities of the 164th AW relocation. This is the final project of \$200M in construction in support of the conversion at this base. <u>CURRENT SITUATION:</u> The Air Force on behalf of the Air National Guard (ANG) and the Memphis-Shelby County Airport Authority signed a Land Exchange Agreement (LEA) which mandates the Airport Authority as the design and construction agent to replicate the existing ANG C-141 facilities on new land at an Airport Authority cost of \$77 million. The Air Force will return the existing 103 acres of land with the buildings occupied by the 164th AW in 2008 when relocation of the

3. INSTALLATION AND LOCATION MEMPHIS INTERNATIONAL AIRPORT, TENNESSEE		
5. PROJECT TITLE C-5 FINAL INFRASTRUCTURE SUPPORT	7. PROJECT NUMBER PYKL059219	
<p>unit to this new site is completed. In return the Airport Authority has provided 118 acres of land and extended the real estate lease from 2024 to 2058 at no cost. This area is being developed as the future base for the 164th AW as they convert to C-5 aircraft (8 PAI) and is a largely unimproved area. This is the final project to finish the base infrastructure, and provides the final site work, utility support, security measures, drainage improvements, and other miscellaneous work after all the other construction is completed.</p> <p>IMPACT IF NOT PROVIDED: Without proper infrastructure the base will be incomplete, creating difficulties in access for base personnel while increasing the risk to DOD members not sufficiently protected with antiterrorism measures. General safety will be compromised, as insufficient lighting will increase the risk of potential harm to 164th AW employees. Operational security will be reduced without appropriate flight line security measures to protect C-5 assets. Vehicles will not be able to be properly parked. Sidewalks will not be available. Gates and pedestrian controls will not exist. The grounds will erode, jeopardizing adjacent structures. Parking lots and sidewalks will not have security/safety lighting.</p> <p>ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements" and is in compliance with the base master plan. Antiterrorism/Force Protection requirements have been considered in the development of this project. All known alternative options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed. This facility can be used by other components on an "as available" basis; however, the scope of the project is based on Air National Guard requirements.</p>

10. Description of Proposed Construction: Two reinforced concrete structures for storage and maintenance of munitions. Security fence, alarms, gates, access roads, utilities, and supporting facilities with necessary electrical, mechanical, and fire protection systems. Communications to include Intrusion Detection System (IDS) support at all storage and munitions maintenance and servicing areas.				
11. REQUIREMENT: 232 SM ADEQUATE: 0 SM SUBSTANDARD: 0 SM <u>PROJECT:</u> C-5 Muntions Storage Complex (New Mission) <u>REQUIREMENT:</u> The 164th AW at Memphis requires a properly configured and properly sized Munitions Storage Area to support 8 (PAI) C-5 Aircraft. <u>CURRENT SITUATION:</u> The 164th AW is relocating to another part of the Memphis IAP. The Air Force on behalf of the Air National Guard (ANG) and the Memphis-Shelby County Airport Authority (MSCAA) has signed a Land Exchange Agreement (LEA) which mandates the Airport Authority as the design and construction agent to replicate the existing ANG C-141 facilities on new land at an Airport Authority cost of \$77 million. The Air Force will return the existing 103 acres of land with the buildings occupied by the 164th AW in 2008 when relocation of the unit to this new site is completed. In return the Airport Authority has provided 118 acres of land and extended the real estate lease from 2024 to 2058 at no cost. This area is being developed as the future base for the 164th AW as they convert to C-5 aircraft (8 PAI) and is a largely unimproved area. A new munitions storage area will be required to complete relocation of the unit as planned. The storage area will allow the storage of explosive items that must be secured and segregated away from habitable buildings. <u>IMPACT IF NOT PROVIDED:</u> Munitions storage will not be available at the new location. To meet the relocation schedule, munitions storage must be completed to support the 164th AW mission requirements. If not provided, alternate interim storage locations will be required which will degrade mission readiness and increase operational cost. In addition, munitions will not be readily available, adversely impacting training. <u>ADDITIONAL:</u> This project meets the criteria/scope specified in Air National Guard Handbook 32-1084, "Facility Requirements" and is in compliance with the base master plan. Antiterrorism/Force

10. Description of Proposed Construction: Earthwork to include top soil stripping, excavation and removal, and placement of cement treated sub base. Pavement work consists of placement of apron under drain system, anchoring system, crushed aggregate base course, concrete pavement and airfield markings; includes installation of a three-sided ground run-up enclosure with aerodynamic enhancements, with associated utilities and site improvements and blast deflectors .				
11. REQUIREMENT: 4,311 SM ADEQUATE: 0 SM SUBSTANDARD: 0 SM PROJECT: C-5 Ground Run-up Enclosure. (New Mission) REQUIREMENT: The 164th AW requires an adequately sized and properly configured noise attenuating ground run-up enclosure to support engine performance power checks for 8 PAI C-5 aircraft. CURRENT SITUATION: The 164th AW converted from C-141 aircraft to 8 PAI C-5 aircraft and is in the process of receiving those aircraft. In addition to conversion, the 164th AW will also relocate to another part of the Memphis airfield in accordance with a Land Exchange Agreement between the Air Force and the Memphis-Shelby County Airport Authority (MSCAA). The C-5 creates a significantly greater amount of noise and creates a much larger noise pattern compared to the C-141. While the C-141 utilized a modest sound suppression system, a comparable sound suppression system does not exist for the C-5. For the C-5 a larger structure must enclose the aircraft to effectively suppress the noise. As an interim measure, maintenance personnel will be required to tow C-5 aircraft to an approved location, a deicing pad, located over two miles away from the new base location, to perform engine runs. Most C-5 engine runs require an entire day to perform. Use of the deicing pad by commercial carriers and a significant FEDEX operation limit availability and the Airport Authority will not allow the ANG to perform engine testing on the deicing apron permanently. The airport authority recently completed a noise study, evaluating all tenant's needs regarding power runs, and concluded engine runs for C-5's on the new Air National Guard Ramp within a ground run-up enclosure would be permissible. This project will allow the ANG to relocate the C-5 engine testing from the deicing apron to an area adjacent to the ramp area reducing significantly the time and distance the C-5 will have to be towed and most importantly permit engine testing in an environmentally safe manner. IMPACT IF NOT PROVIDED: Without the ground run-up enclosure, C-5s must continue to be towed over two miles from the new base in order to use the airport's deicing pad for engine power checks.

10. Description of Proposed Construction: Reinforced concrete foundation and floor slab, steel-framed masonry walls, and sloped roof. Interior shop space of 325 SM, walls, fire protection and utilities including fumes extracting systems and floor drains. Exterior utilities, pavements, site improvements, communications extension and support. Demolish one building (1,901 SM). Air Conditioning: 158 KW.				
11. REQUIREMENT: 7,497 SM ADEQUATE: 0 SM SUBSTANDARD: 1,901 SM PROJECT: C-5 Fuel Cell Maintenance Hangar and Shops (New Mission). <u>REQUIREMENT:</u> The base requires an adequately sized and configured aircraft fuel cell maintenance hangar and shop in support of the 167th Airlift Wing's (AW) conversion to 10 PAI C-5 aircraft in 2007. Functional areas include a fully enclosed aircraft hangar, shop space and administrative areas that are directly related to the fuel cell maintenance function. <u>CURRENT SITUATION:</u> The 167th AW currently flies 12 PAI C-130 aircraft. The base has only two aircraft maintenance spaces and both are much too small to support maintenance activities required for C-5 aircraft. The much larger C-5 cannot fit in the existing facilities. Modifications/additions are not possible since the 1,901 SM hangar is in the way of construction and must be demolished. <u>IMPACT IF NOT PROVIDED:</u> The base will have to perform maintenance of the C-5 fuel systems at an alternative C-5 base or outdoors. Work is not possible on the apron during periods of inclement weather. Such conditions will decrease unit's ability to maintain and generate aircraft and pose a danger to the maintenance crews and possible fuel spills on the apron. <u>ADDITIONAL:</u> This project meets the criteria/scope specified in Air National Guard Handbook 32-1084, "Facility Requirements" and is in compliance with the base master plan. All known alternatives/options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed. This facility is an "inhabited" building and meets the standoff distance requirements. There is no threat and the level of protection is low so minimum construction standards have been applied. The existing C-130 fuel cell hangar (building 128; 1,901 SM) will be demolished as a result of this project. This facility can be

10. Description of Proposed Construction: Reinforced concrete foundation and floor slab with steel-framed masonry walls and roof structure. Interior walls and utilities. Includes all exterior utility systems, site improvements, fire protection and communications support. Building exterior compatible with the base architectural style. Demolish one building (3,034 SM) and landscape the site. Air Conditioning: 438 KW.					
11. REQUIREMENT: 2,787 SM ADEQUATE: 0 SM SUBSTANDARD: 3,034 SM <u>PROJECT:</u> C-5 Squadron Operations Facility (New Mission). <u>REQUIREMENT:</u> The base requires an adequately sized and properly configured facility to accommodate airlift squadron operations in support of the unit's conversion from 12 C-130 aircraft to 10 PAI C-5 aircraft. Functions to be accommodated include weapons and tactics, intelligence, briefing/debriefing, standardization and evaluation, flight planning, flight safety, flight records, physical training, life support, scheduling, unit administration, aircrew chemical warfare equipment, the base command post, base operations, and a transient passenger waiting area. <u>CURRENT SITUATION:</u> The squadron operations function is housed in a two-story building and shares the space with other functions. The squadron operations function is severely short of space and not adequately configured for a smooth and efficient flow for C-5 strategic flying operations. Due to site constraints, a building addition is not possible. The building does not meet standoff distance for force protection. Current interior configuration requires pilots and other crew members to detour throughout the building to obtain all essential information and equipment needed to prepare for a flying mission to include intelligence, flight briefing, life support equipment and flight plans. The facility does not have a waiting area for in-transit military passengers. Experience indicates that the C-5 aircraft will have significant in-transit passengers who travel to and from overseas. Accommodations for these in-transit personnel are required for strategic cargo aircraft such as the C-5 and C-17, and not the C-130. The survival equipment shop is severely undersized and will not support the maintenance of required life rafts. As part of the C-5 conversion, the entire aircraft parking apron area has been

10. Description of Proposed Construction: Provide wear surface an all new roads/parking and upgrade existing roadways by removing deteriorated pavements and replacing with bituminous pavements, upgrade roads from asphaltic pavement to concrete pavement; install roadway lighting, provide necessary site improvements, install base signage and provide communication duct bank to match existing system. Provide security fencing around the aircraft parking apron. Improve the drainage system by extending the culverts and drainage ditches. Relocate the electrical system underground. Provide blast fences and noise mitigation measures. Demolish roads and pavements no longer required.					
11. REQUIREMENT: As Required. PROJECT: C-5 Infrastructure Upgrade (New Mission). REQUIREMENT: The base requires properly aligned, adequately sized and serviceable vehicle pavements and other infrastructure that meet the antiterrorism force protection requirements to support 10 PAI C-5 aircraft. CURRENT SITUATION: This is the final project of a \$200M construction effort in support of the conversion from C-130 to C-5. The roadways being provided in support of the new portion of the base have only a base course during the initial period of construction, and require a wear surface to complete the roadways. The existing vehicle pavements are misaligned and too close to existing facilities; in several cases the systems are deteriorated and not adequately sized to support the new routes that are necessary for the maintenance requirements of the C-5 aircraft. Vehicles necessary to support the C-5 aircraft are much larger and heavier than the currently assigned vehicles. The current asphaltic pavement roads cannot structurally support these vehicles and will experience accelerated deterioration. The construction effort since 2004 in this multi-project, multi-year aircraft beddown has caused damage to the roads and pavements, increasing the risk of FOD migrating to the aircraft operating surfaces. Two-way traffic on these roads is also difficult at best, resulting in an increased potential for vehicle accidents. Several roads run too close to inhabited buildings and do not meet antiterrorism force protection standards. These sections of the road will need to be relocated. The new expanded apron does not have security fencing around it. IMPACT IF NOT PROVIDED: Undersized roadways increase risk of vehicular accidents. Damaged pavements continue to deteriorate, adding risk of FOD migration to aircraft operating surfaces.

DEPARTMENT OF THE AIR FORCE
JUSTIFICATION OF ESTIMATES FOR FISCAL YEAR 2008

APPROPRIATION: MILITARY CONSTRUCTION -- AIR NATIONAL GUARD
PROGRAM 313: PLANNING AND DESIGN \$7,965,000

PART I -- PURPOSE AND SCOPE

The funds estimated in this program are to provide financing for project planning and design of the construction requirements for the Air National Guard

PART II -- JUSTIFICATION OF FUNDS REQUESTED

The funds required for Planning and Design will provide for establishing project construction design of the facilities and for fully evaluating each designed project in terms of technical adequacy and estimated costs.

1. COMPONENT ANG	FY 2008 MILITARY CONSTRUCTION PROJECT DATA (computer generated)			2. DATE February 2007	
3. INSTALLATION AND LOCATION VARIOUS LOCATIONS		4. PROJECT TITLE PLANNING AND DESIGN			
5. PROGRAM ELEMENT 55296F	6. CATEGORY CODE 999-999	7. PROJECT NUMBER AAAA080001	8. PROJECT COST(\$000) \$7,965		
9. COST ESTIMATES					
ITEM		U/M	QUANTITY	UNIT COST	COST (\$000)
PLANNING AND DESIGN (P-313)		LS			7,965
SUBTOTAL					7,965
TOTAL CONTRACT COST					7,965
TOTAL REQUEST					7,965
10. Description of Proposed Construction: The funds requested will provide for the architectural and engineering services necessary to fully evaluate each project's technical adequacy and estimated cost, and complete final design of facilities. In addition, the funds are required to prepare working drawings, specifications, and project reports for the design of construction projects to be included in future Air National Guard (ANG) Military Construction (MILCON) Programs.					
11. REQUIREMENT: As Required <u>PROJECT:</u> Planning and Design <u>REQUIREMENT:</u> The ANG needs planning and design funds for projects that are to be included in future MILCON programs. The FY 2008 design funds are needed to complete the design for those projects that are to be included in the FY 2009 MILCON program and to begin the design for those projects to be included in the FY 2010 program. Funds also provide for design of the FY 2008 unspecified minor construction program. <u>CURRENT SITUATION:</u> The ANG requires the design money in FY 2008 to ensure the design milestones for the FY 2009 and FY 2010 MILCON Programs, as mandated by Department of Defense (DOD) Instruction 1225.8, are met. <u>IMPACT IF NOT PROVIDED:</u> The ANG will not be able to effectively administer future year MILCON programs. Insufficient design funds will translate into late design completion, later construction starts, higher construction costs, and the inability to meet DOD and Congressionally mandated execution rates, and degrade the operational mission and training by the delays in construction completion.					

DEPARTMENT OF THE AIR FORCE
JUSTIFICATION OF ESTIMATES FOR FISCAL YEAR 2008

APPROPRIATION: MILITARY CONSTRUCTION -- AIR NATIONAL GUARD
PROGRAM 341: UNSPECIFIED MINOR CONSTRUCTION \$6,500,000

PART I -- PURPOSE AND SCOPE

The funds estimated in this program are to provide financing for new construction and alteration projects having cost estimates over \$750,000 but not exceeding \$1,500,000, which are not otherwise authorized by law.

PART II -- JUSTIFICATION OF FUNDS REQUESTED

The funds required for Unspecified Minor Construction will finance projects for which the urgency is such that they could not be included in the regular Military Construction Program for the Air National Guard, and such that they exceed the minor construction authorization limit in the Operation and Maintenance Appropriation.

1. COMPONENT ANG	FY 2008 MILITARY CONSTRUCTION PROJECT DATA (computer generated)			2. DATE February 2007	
3. INSTALLATION AND LOCATION VARIOUS LOCATIONS		4. PROJECT TITLE UNSPECIFIED MINOR CONSTRUCTION			
5. PROGRAM ELEMENT 55296F	6. CATEGORY CODE 999-999	7. PROJECT NUMBER AAAA080002	8. PROJECT COST(\$000) \$6,500		
9. COST ESTIMATES					
ITEM		U/M	QUANTITY	UNIT COST	COST (\$000)
UNSPECIFIED MINOR CONSTRUCTION (P-341)		LS			6,500
SUBTOTAL					6,500
TOTAL CONTRACT COST					6,500
TOTAL REQUEST					6,500
10. Description of Proposed Construction: Provides funding for unspecified minor construction projects not otherwise authorized by law and having a funded cost between \$750,000 and \$1,500,000. Projects include construction, alteration, or conversion of permanent or temporary facilities. The Secretary of the Air Force has the authority to approve projects of this nature under the provisions of 10 U. S. Code 18233a and 10 U. S. Code 2805.					
11. REQUIREMENT: As Required <u>PROJECT:</u> Unspecified Minor Construction Program <u>REQUIREMENT:</u> This program provides the means of accomplishing urgent, unforeseen projects costing over \$750,000, but not exceeding \$1,500,000. The project requirements are anticipated to arise during late FY 2008 or FY 2009, and would be needed to satisfy critical, urgent mission beddowns and weapon system conversions, or to meet serious and urgent health, safety, and environmental requirements. The late identification of these requirements prevents their inclusion in the FY 2008 MILCON program and the projects cannot wait for the FY 2009 program. The requested funds are not a percent of the budget, but are based on historical trends. Routine and non-urgent projects are not funded from this account. <u>CURRENT SITUATION:</u> As in the recent past, it is expected that the Air Force will continue to transfer missions and force structure into the ANG. These aircraft conversions and beddowns generate facility requirements that are often late-to-need using normal MILCON programming avenues. The urgency of the required projects is driven by the arrival of new aircraft and equipment, or the need to eliminate immediate health, safety or environmental requirements or personnel growth. <u>IMPACT IF NOT PROVIDED:</u> Unable to adequately support mission conversions and beddowns. More expensive workarounds will have to be used. Formal reprogramming is the only other option available, however, funds may not be available for these reprogrammings.
