**DEPARTMENT OF THE AIR FORCE
AIR NATIONAL GUARD
MILITARY CONSTRUCTION PROGRAM FOR FISCAL YEAR 2016**

SECTION I

APPROPRIATIONS LANGUAGE

For construction, acquisition, expansion, rehabilitation, and conversion of facilities for the training and administration of the Air National Guard, and contributions therefor, as currently authorized by law, \$138,738,000 to remain available until September 30, 2020.

SPECIAL PROGRAM CONSIDERATIONS

Environmental Compliance

The environmental compliance projects proposed in this program are necessary to correct current environmental noncompliance situations and to prevent future noncompliance.

Flood Plain Management and Wetland Protection

Proposed land acquisitions, disposals, and installation construction projects have been planned in accordance with the requirements of Executive Orders 11988, Flood Plain Management, and 11900, Protection of Wetlands. Projects have been sited to avoid long and short-term adverse impacts, reduce the risk of flood losses, and minimize the loss, or degradation of wetlands.

Design for Accessibility of Physically Handicapped Personnel

In accordance with Public Law 90-480, provisions for physically handicapped personnel will be provided for, where appropriate, in the design of facilities included in this program.

Preservation of Historical Sites and Structures

Facilities included in this program do not directly or indirectly affect a district, site, building, structure, object, or setting listed in the National Register of Historic Places, except as noted on the DD Forms 1391.

Environmental Protection

In accordance with Section 102(2) (c) of the National Environmental Policy Act of 1969 (PL 91-190), the environmental impact analysis process has been completed or is actively underway for all projects in the Military Construction Program.

Economic Analysis

Economics are an inherent aspect of project development and design of military construction projects. Therefore, all projects included in this program represent the most economical use of resources.

SPECIAL PROGRAM CONSIDERATIONS
(continued)

Reserve Manpower Potential

The reserve manpower potential to meet and maintain authorized strengths of all reserve flying/non-flying units in those areas in which these facilities are to be located has been reviewed. It has been determined, in coordination with all other Services having reserve flying/non-flying units in these areas, that the number of units of the reserve components of the Armed Forces presently located in those areas, and those which have been allocated to the areas for future activation, is not and will not be larger than the number that reasonably can be expected to be maintained at authorized strength considering the number of persons living in the areas who are qualified for membership in those reserve units.

Construction Criteria Manual

Unless otherwise noted, the projects comply with the scope and design criteria prescribed in the Unified Facilities Criteria (UFC).

10. Description of Proposed Construction: Construct a fighter squadron operations and support facility utilizing conventional design and construction methods to accommodate the mission of the facility. Facility shall be designed as permanent construction in accordance with the DoD Unified Facilities Criteria. The facility should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. This project will comply with DoD antiterrorism/force protection requirements per unified facilities criteria. Exterior work includes: all necessary exterior utilities, access pavements, fire protection, site work, and support. Demolish building and provide vehicle parking. Air Conditioning: 350 KW.					
11. REQUIREMENT: 2,769 SM ADEQUATE: 0 SM SUBSTANDARD: 1,819 SM PROJECT: TFI - Replace Squadron Operations Facility (Current Mission) REQUIREMENT: The base requires a properly sized and configured squadron operations facility for the assigned Total Force Integration (TFI) mission. Functional requirements include: weapons and tactics, intelligence, briefing/debriefing, standardization and evaluation, flight planning, flight safety, flight records, physical training, life support, survival equipment scheduling, unit administration, aircrew chemical warfare equipment and base operations. CURRENT SITUATION: The squadron operations facility is too small for the mission requirements. It is approximately 40% undersized. It cannot be expanded due to site limitations, force protection (FP) required set backs and environmental contamination. The building is only 51 feet from the perimeter fence and a major public road resulting in over 75% of the occupied building space being within the FP setback. The building is constrained on all sides by other facilities. The only possibility for expansion is toward the flightline where new construction would block a major base roadway that cannot be replicated. IMPACT IF NOT PROVIDED: The lack of adequate space limits the amount of time pilots have allocated to conduct briefings/debriefings, such as: intelligence, standardization/evaluations, flight and ground safety, and mission planning. These time constraints do not allow pilots to obtain adequate

5. PROJECT TITLE TFI - REPLACE SQUADRON OPERATIONS FACILITY	7. PROJECT NUMBER FAKZ059173																	
<p>training, severely impacting safety and the unit's ability to maintain combat ready pilots. Daily security operations will be hindered.</p> <p><u>ADDITIONAL</u>: This project meets the criteria/scope specified in ANG Handbook 32-1084, "Facility Requirements." Antiterrorism/Force Protection requirements have been considered in the development of this project. This facility can be used by other components on an "as available" basis; however, the scope of the project is based on Air National Guard and active duty requirements. The following buildings will be demolished as a result of this project: 1316 (at 1,819 SM), 1206 (at 74 SM) and 1319 (at 116 SM) for a total of 2009 SM. Buildings 1206 and 1319 are in the way of construction. All known alternatives/options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed. A certificate of exemption is available. Sustainable principles, to include Life Cycle cost effective practices, will be integrated into the design, development and construction of the project in accordance with Executive Order 13423, 10 USC 2802(c) and other applicable laws and Executive Orders</p> <table border="0" data-bbox="235 940 1412 1144"> <thead> <tr> <th data-bbox="235 940 341 972">CatCode</th> <th data-bbox="911 940 1062 972">Requirement</th> <th data-bbox="1105 940 1219 972">Adequate</th> <th data-bbox="1263 940 1412 972">Substandard</th> </tr> </thead> <tbody> <tr> <td data-bbox="235 972 708 1003">141-753 SQUADRON OPERATIONS</td> <td data-bbox="943 972 1062 1003">2,769 SM</td> <td data-bbox="1149 972 1219 1003">0 SM</td> <td data-bbox="1295 972 1412 1003">1,819 SM</td> </tr> <tr> <td data-bbox="212 1077 708 1108">SQUADRON OPERATIONS FACILITY</td> <td colspan="3" data-bbox="792 1077 1062 1108">2,769 SM = 29,800 SF</td> </tr> <tr> <td data-bbox="212 1108 708 1140">DEMOLITION/ASBESTOS REMOVAL</td> <td colspan="3" data-bbox="792 1108 1062 1140">2,009 SM = 21,630 SF</td> </tr> </tbody> </table>			CatCode	Requirement	Adequate	Substandard	141-753 SQUADRON OPERATIONS	2,769 SM	0 SM	1,819 SM	SQUADRON OPERATIONS FACILITY	2,769 SM = 29,800 SF			DEMOLITION/ASBESTOS REMOVAL	2,009 SM = 21,630 SF

<p>10. Description of Proposed Construction: Construct a facility for a consolidated 3-mission Sensitive Compartmentalized Information Facility (SCIF). Facilities will be designed as permanent construction in accordance with DoD Unified Facilities Criteria (UFC) 1-200-01, General Building Requirements. The facility should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. This project will comply with DoD antiterrorism/force protection requirements per unified facilities criteria. Special Construction Requirements: SCIF, 30 KW standby generator, raised flooring or other cabling system, and security alarm systems. Provide allied support for communications requirements and system upgrades. Exterior utility extensions and connections to current base infrastructure. Install exterior fencing with intrusion detection system IDS and electronic key entry. Overlay road crossings, construct sidewalks, install storm drainage to conform with all environmental compliance issues where required.</p> <p>Air Conditioning: 700 KW.</p>					
<p>11. REQUIREMENT: 3,716 SM ADEQUATE: 0 SM SUBSTANDARD: 3,716 SM <u>PROJECT:</u> Construct a Consolidated SCIF facility to house a three-mission complex at Ft Smith: The Digital Ground Station (DGS), a Remote Pilot Aircraft Unit (RPA), and an Intel Targeting Squadron. (New Mission) <u>REQUIREMENT:</u> The base requires an adequately sized and appropriately configured space for the establishment of a DGS, an RPA, and Intel Targeting function for beddown in a final operating capability (FOC) consolidated SCIF facility. A DGS receives classified data in real time, processes the data, and transmits the results to customers for mission employment activities. Both operational missions and training activities for assigned ANG personnel will be conducted in the facility. Functional requirements include: operational space for data receipt, processing, and retransmission by on-duty crews working shift operations; analysis areas; equipment operations, maintenance, and storage areas; maintenance work stations; and administrative support and command areas. Operations space will support two high altitude orbits and three medium altitude orbits 24 hours a day. In addition, there should be at least 12 additional workstations to allow training to occur simultaneously. This equates to 42 intelligence data terminals/work stations for the daily production of classified intelligence information and sufficient training workspace, complete with stand by power, switch gear, and</p>

3. INSTALLATION AND LOCATION FORT SMITH MUNICIPAL AIRPORT, ARKANSAS																		
5. PROJECT TITLE CONSOLIDATED SCIF	7. PROJECT NUMBER HKRZ129076																	
<p>uninterrupted power supply. Operational space is required for the SCIF area for RPA and simulators and bay for the mobile RPA unit provided by users. The targeting Operations floor will provide a shift space for 72 operators per shift. This project supports the final bed down of 655 ANG full- and part-time personnel.</p> <p><u>CURRENT SITUATION:</u> The FY13 National Defense Authorization Act supported the President's Budget request to remove the A-10 flying mission from Fort Smith and provide replacement missions. The base has received a DGS, an RPA, and an Intel Targeting missions. No adequate facility on base can provide a consolidated space solution for these three missions. Interim mission capability is being provided with temporary secure facilities. Full Operational Capability (FOC) date is FY17 for all missions.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Accept risk to mission from inadequate facilities which do not meet minimum security requirements. The full DGS, RPA, and Intel Targeting mission cannot be bedded down at this installation which means that the mission's FOC date will not be achieved. The existing space on base does not have the required space for SCIFs, training, storage, and administration required by 655 ANG mission personnel. Continued operation in temporary facilities is expensive, and falls far short of space, security, and operational requirements.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Air National Guard Handbook 32-1084, "Facility Requirements". Antiterrorism/Force Protection requirements have been considered in the development of this project. Mission requirements, operational considerations and location are incompatible with use by other components. An economic analysis is being prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation however preliminary analysis shows the construction of a consolidated facility to be the best choice. The facility requires a non-centralized uninterruptable power supply system (UPS) for mission equipment that will be purchased with other than MILCON funds. Sustainable principles, to include Life Cycle cost effective practices, will be integrated into the design, development and construction of the project in accordance with Executive Order 13423, 10 USC 2802© and other applicable laws and Executive Orders.</p>

10. Description of Proposed Construction: Construct a Vehicle Maintenance Facility and Shed utilizing conventional design and construction methods to accommodate the mission of the facility. Facilities will be designed as permanent construction in accordance with the DoD Unified Facilities Criteria (UFC) 1-200-01, General Building Requirements and UFC 1-200-02, High Performance and Sustainable Building Requirements. The facility should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. This project will comply with DoD antiterrorism/force protection requirements per unified facilities criteria. Air Conditioning: 35 KW.					
11. REQUIREMENT: 1,189 SM ADEQUATE: 0 SM SUBSTANDARD: 3,321 SM PROJECT: Replace Vehicle Maintenance Facility (Current Mission). REQUIREMENT: The 129 Rescue Wing (RQW) supports a rescue mission with 4-PAA C-130 and 6-PAA HH-60 aircraft. The 129 RQW requires a properly sized and configured vehicle maintenance facility in which to train vehicle maintenance personnel as well as perform repair, maintenance and upkeep of military vehicles. Functional areas include repair bays large enough to accommodate assigned vehicles to include refueling vehicles; battery shop, administration, training classroom and covered storage for vehicles, parts, tools and non-organizational vehicle parking. CURRENT SITUATION: The 129 RQW has been assigned to Moffett Federal Airfield since 1978 as a tenant to the airfield host. The property transferred to the National Aeronautical and Space Administration (NASA) Ames Research Center (ARC) in 1994. A permit between the Air Force and NASA allows the ANG to occupy these facilities until NASA wants them returned. NASA plans to develop the airfield into an open campus concept, via a commercial venture. The 7.7 acre site where the ANG vehicle maintenance facility is located will be impacted. This plan is expected to happen within the next two to four years. Additionally, once NASA opens their gates to the open campus concept, there will be no restrictive control of traffic in the area around the site where the vehicle

3. INSTALLATION AND LOCATION MOFFETT FIELD, CALIFORNIA																						
5. PROJECT TITLE REPLACE VEHICLE MAINTENANCE FACILITY	7. PROJECT NUMBER QMSN099104																					
<p>maintenance facility is located. The relocation of the vehicle maintenance facility is a main focus of NASA ARC and a cornerstone of the approved 129 RQW Base Master Plan. This project will relocate the vehicle maintenance function from the site that NASA plans to develop to an area where the Air Force has a permit that will expire in 50 years. In addition, the current vehicle maintenance facility is located approximately two miles from the main cantonment area of the 129 RQW. This is inefficient for vehicle maintenance personnel requiring training or to meet appointments at the 129 RQW main cantonment area as well as for unit vehicles requiring service or maintenance. The existing facilities are oversized, antiquated and energy inefficient. They do not have the proper fire protection system. There are numerous health and safety hazards and with the NASA open campus concept, there will not be an Antiterrorism/Force Protection (AT/FP)-compliant perimeter security.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Accept risk to mission and Airmen due to inadequate security and inefficient operations. The 129 RQW will continue to be in violation of AT/FP regulations. Due to NASA's development plans, 129 RQW vehicle maintenance personnel may soon not have a facility in which to work and train. If allowed to persist in the inadequate facility further, the distance between the vehicle maintenance facility and the 129 RQW main cantonment area will continue to cause substantial inefficiencies in personnel training and vehicle maintenance. Higher operating costs due to the oversized and antiquated vehicle maintenance facility, as well as exposing vehicle maintenance personnel to numerous health and safety hazards.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Air National Guard Handbook 32-1084, "Facility Requirements" and is in compliance with the base master plan. AT/FP requirements have been considered in the development of this project. This facility can be used by other components on an "as available" basis; however, the scope of the project is based on Air National Guard requirements. Project will incorporate Leadership in Energy and Environmental Design (LEED) and sustainable development concepts, so as to achieve optimum resource efficiency, constructability, sustainability, and energy conservation, while minimizing adverse impacts to the built and natural environments through all phases of its life cycle. This may result in primary facility costs exceeding DoD costing standards, but the initial investment in higher acquisition costs will be rewarded with lower life cycle costs. This is consistent with the requirements of the Energy Policy Act of 2005 (EPAct05) and Executive Order 13423. Upon completion of this project, 3321 SM of space and 7.7 acres of land will be removed from the Air Force inventory and returned to NASA, as set forth in the permit. All known alternatives/options were considered during the development of this project. No other option could meet the mission requirements; therefore, a request for exemption from economic analysis will be submitted.</p> <table border="0" data-bbox="235 1564 1412 1732"> <thead> <tr> <th>CatCode</th> <th>Requirement</th> <th>Adequate</th> <th>Substandard</th> </tr> </thead> <tbody> <tr> <td>214-425 VEHICLE MAINTENANCE SHOP</td> <td>502 SM</td> <td>0 SM</td> <td>3,321 SM</td> </tr> <tr> <td>610-121 VEHICLE OPERATIONS ADMIN</td> <td>177 SM</td> <td>0 SM</td> <td>0 SM</td> </tr> <tr> <td>214-428 VEHICLE OPS PARKING SHED</td> <td>743 SM</td> <td>0 SM</td> <td>0 SM</td> </tr> <tr> <td>214-467 REFUELING VEHICLE SHOP</td> <td>139 SM</td> <td>0 SM</td> <td>0 SM</td> </tr> </tbody> </table> <p>VEHICLE MAINTENANCE SHOP (214425) 502 SM = 5,400 SF VEHICLE OPERATIONS ADMINISTRATIVE (610121) 177 SM = 1,900 SF VEHICLE STORAGE SHED (214428) 743 SM = 8,000 SF REFUELING VEHICLE MAINTENANCE SHOP (214467) 139 SM = 1,500 SF</p>			CatCode	Requirement	Adequate	Substandard	214-425 VEHICLE MAINTENANCE SHOP	502 SM	0 SM	3,321 SM	610-121 VEHICLE OPERATIONS ADMIN	177 SM	0 SM	0 SM	214-428 VEHICLE OPS PARKING SHED	743 SM	0 SM	0 SM	214-467 REFUELING VEHICLE SHOP	139 SM	0 SM	0 SM

10. Description of Proposed Construction: Construct an Aircraft Support Equipment (ASE) maintenance and storage facility utilizing conventional design and construction methods to accommodate the mission of the facility. Facilities will be designed as permanent construction in accordance with the DoD Unified Facilities Criteria (UFC) 1-200-01, General Building Requirements and UFC 1-200-02, High Performance and Sustainable Building Requirements. The facility should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. This project will comply with DoD antiterrorism/force protection requirements per unified facilities criteria. Special Construction Requirements: Reinforced concrete caissons and grade beam foundation, floor slab on grade, erosion control, drainage and landscape. Interior hoists, indoors wash rack, tool crib, bench stock storage, battery servicing area, exhaust extraction system, covered storage, and administrative space. Air Conditioning: 88 KW.					
11. REQUIREMENT: 1,161 SM ADEQUATE: 0 SM SUBSTANDARD: 959 SM PROJECT: ASE Maintenance Shop and Storage Facility (Current Mission) REQUIREMENT: An adequately maintained and configured Aircraft Ground Equipment (AGE)/ASE maintenance shop. This shop inspects, maintains, repairs, and services powered and non-powered equipment to directly support 18 PAI F-16 aircraft, as well as powered-munitions ASE. CURRENT SITUATION: The existing AGE/ASE facility was constructed 35 years ago and much of the infrastructure systems are original to the date of construction. As such, many systems are well beyond the expected useful life and are rapidly deteriorating. The current facility HVAC, electrical system, plumbing, fire protection, flooring, doors, windows, ceilings, lighting and overall size are inadequate to support the mission. The building has no forced air exhaust and is incapable of removing fumes from maintaining aerospace support equipment inside and is hazardous to occupants and administrative areas. The heating and air movement systems are inefficient and costly to operate and maintain. Due to the expansive soils and inadequate foundation, cracking and settling have caused

3. INSTALLATION AND LOCATION BUCKLEY AIR FORCE BASE, COLORADO										
5. PROJECT TITLE ASE MAINTENANCE AND STORAGE FACILITY	7. PROJECT NUMBER CRWU069125									
<p>problems with interior and exterior walls as well as the slab on grade floor. The pavement surrounding the AGE/ASE yard is asphalt and must be replaced with Portland Cement Concrete pavement in order to mitigate environmental concerns with containment of fuel and hydraulic fluids that may occasionally spill and can damage or soak through asphalt. Costs from a recent facility assessment study identified repairs in excess of 74% of the building replacement value. Coupled with the construction requirement, the facility is also undersized. Finally, the current facility is sited inappropriately in an administrative area adjacent to the 140th Wing and Mission Support Group headquarters whereas its proper place is as a flight line back shop. This location is inefficient for maintenance and repair of the equipment. The building openings and roof height are not large enough to allow equipment inside for maintenance. The existing facility requires abatement of asbestos found in the masonry mortar, boiler, floor tiles, mastic and window caulking. Paint on the facility is peeling. The garage doors do not function adequately and constantly need repairs and lack all safety devices due to age and the fact that they are manually operated. Restrooms are not ADA compliant and occupants have no access to shower facilities. Repairing the current facility and adding the deficit space would exceed the minor construction cost limitation, would preserve an eyesore on the base, and continue inefficient operations for another 30 years.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Non-compliance with DoD, AF and ANG flying mission support guidance. The substandard facility will continue to deteriorate, escalating poor readiness, working conditions and increased risk to personnel and aircraft, resulting in negative impact on the ASA mission & day-to-day preparation for AEF taskings. Maintenance activity costs and energy consumption for this facility are unacceptable and will continue to rise. The AGE/ASE maintenance personnel will continue to operate inefficiently as they travel back and forth to the flight line via the main base thoroughfare and across the main ramp to collect equipment for maintenance and repairs and return to the shop. Much training time and mission accomplishment time continues to be wasted transporting equipment or traveling to pick up an unscheduled equipment breakdown. Because of the lack of indoor storage space, inefficient heating and poor configuration, the especially cold winter months make the training and mission accomplishment environment difficult as personnel struggle with cold weather mixed with heavy snow, ice and wind. This adversely impacts mission accomplishment.</p> <p><u>ADDITIONAL:</u> This project will provide an adequate AGE/ASE facility capable of meeting Buckley AFB mission requirements according to Air National Guard Handbook 32-1084, Facility Requirements. This facility is "inhabited" and meets the standoff distance requirements for Force Protection. There is a minimal threat and the level of protection is low, so minimum construction standards have been applied. Sustainable principles, to include Life Cycle cost effective practices, will be integrated into the design, development and construction of the project in accordance with Executive Order 13423, 10 USC 2802(c) and other applicable laws and Executive Orders. An economic analysis is being prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on preliminary evaluation, new construction is likely the best alternative.</p> <table border="0" data-bbox="235 1743 1412 1816"> <tr> <td>CatCode</td> <td>Requirement</td> <td>Adequate</td> <td>Substandard</td> </tr> <tr> <td>218-712 AIRCRAFT SUPPORT EQUIPMENT (ASE)</td> <td>1,161 SM</td> <td>0 SM</td> <td>959 SM</td> </tr> </table> <p>CONSTRUCT ADMIN/SHOP & STORAGE 1,161 SM = 12,500 SF</p>			CatCode	Requirement	Adequate	Substandard	218-712 AIRCRAFT SUPPORT EQUIPMENT (ASE)	1,161 SM	0 SM	959 SM

10. Description of Proposed Construction: Construct an ANG C-130 squadron operations facility utilizing conventional design and construction methods to accommodate the mission of the facility. The facility will be designed as permanent construction in accordance with the DoD Unified Facilities Criteria (UFC) 1-200-01 and UFC 1-200-02. The facility should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. This project will comply with DoD antiterrorism/force protection requirements per unified facilities criteria. Provide 30KW standby power generator. Reinforced concrete foundation and floor slab, pile drive to bedrock at main support beam footers due to poor in-situ soil conditions. Design as an open administrative plan to accommodate flexible design for the floor plan. Demolish facilities in footprint of new construction. Air Conditioning: 420 KW.					
11. REQUIREMENT: 2,285 SM ADEQUATE: 0 SM SUBSTANDARD: 2,498 SM PROJECT: C-130 Squadron Operations Facility (Current Mission). <u>REQUIREMENT:</u> The base requires properly sited and adequately configured space for planning, briefing, scheduling and administration functions to support aircrews flying the assigned 8-PAA C-130 aircraft. Includes command post and base operations functions. <u>CURRENT SITUATION:</u> The squadron operations function is located in 5 facilities and in particular housed on multiple floors in an inadequate portion of a maintenance hangar. They are unsuitably configured and cannot accommodate training requirements and day to day operations. The space in the hangar is required for C-130 aircraft maintenance functions. There is no room for expansion of the squadron operations spaces. The space Squadron Operations occupies will become maintenance shops and administrative areas that will solve a long term maintenance space issue for the 165th AW. Aircraft maintenance shop space is 25% short of requirement. <u>IMPACT IF NOT PROVIDED:</u> Continued inadequate mission planning and support to the aircrews assigned to the tactical airlift mission. Necessary maintenance mission modifications to the hangar cannot be accomplished due to the space taken by location of Squadron Operations. Maintenance and training on the C-130 aircraft will be degraded. Inadequate maintenance will reduce the unit's ability to

<p>attain wartime readiness and will adversely affect the overall safety of operations. The wing's ability to achieve a full and efficient operations capacity remains degraded. The ANG continues to accept the risk of ineffective, inefficient operations from worn out, inadequate facilities.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Air National Guard Handbook 32-1084, "Facility Requirements" and is in compliance with the base master plan. Antiterrorism/Force Protection requirements have been considered in the development of this project. Buildings 1906, (1378 SM), 1907 (242 SM), and 1914 (753 SM) for a total of 2373 SM fall in the footprint of the new facility and must be demolished as part of the construction. Upon completion of this project, spaces in the maintenance hangar currently occupied by squadron operations functions will be reconfigured to support aircraft maintenance functions. An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. New construction has been found to be the best life-cycle cost alternative. This facility can be used by other components on an "as available" basis; however, the scope of the project is based on Air National Guard requirements. Sustainable principles, to include Life Cycle cost effective practices, will be integrated into the design, development and construction of the project in accordance with Executive Order 13423, 10 USC 2802(c) and other applicable laws and Executive Orders.</p> <table border="0" data-bbox="235 1008 1412 1144"> <thead> <tr> <th>CatCode</th> <th>Requirement</th> <th>Adequate</th> <th>Substandard</th> </tr> </thead> <tbody> <tr> <td>141-753 SQUADRON OPERATIONS</td> <td>1,839 SM</td> <td>0 SM</td> <td>2,135 SM</td> </tr> <tr> <td>141-453 BASE OPERATIONS</td> <td>186 SM</td> <td>0 SM</td> <td>186 SM</td> </tr> <tr> <td>141-461 USAF COMMAND POST</td> <td>260 SM</td> <td>0 SM</td> <td>177 SM</td> </tr> </tbody> </table> <p>SQUADRON OPERATIONS AREA 2,285 SM = 24,600 SF</p>			CatCode	Requirement	Adequate	Substandard	141-753 SQUADRON OPERATIONS	1,839 SM	0 SM	2,135 SM	141-453 BASE OPERATIONS	186 SM	0 SM	186 SM	141-461 USAF COMMAND POST	260 SM	0 SM	177 SM

10. Description of Proposed Construction: Convert Building 430 to support an Air Operations Group/Cyber Network Warfare Squadron utilizing conventional design and construction methods to accommodate the mission of the facility. Facilities will be designed as permanent construction in accordance with the DoD Unified Facilities Criteria (UFC) 1-200-01, General Building Requirements and UFC 1-200-02, High Performance and Sustainable Building Requirements. The facility should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. Special Construction Requirements: Sensitive Compartmentalized Information Facility (SCIF), security alarms, and special communication support. Remove/relocate parking pavement as needed to support Antiterrorism/Force Protection requirements. Air Conditioning: 420 KW.					
11. REQUIREMENT: 1,765 SM ADEQUATE: 0 SM SUBSTANDARD: 0 SM <u>PROJECT:</u> Convert Building 430 for AOG Beddown/Cyber Network Warfare Squadron (NWS) Facility (New Mission). <u>REQUIREMENT:</u> Des Moines Air Guard Station has been selected as a beddown site for an Air Operations Group (AOG)/Cyber Protection Squadron (CPT) to conduct cyber operations. The AOG includes the Air Force Forces (AFFOR) portion with SCIF requirements within the operating floor. Functional spaces include administration, communications shop and storage, secure operations floor space, and SCIF areas. Facilities support day-to-day activities associated with wartime skills training and potential reachback capability for AOG personnel. Communications requirements include Non-Secure Internet Protocol Router Network (NIPRNET), SECRET Internet Protocol Router Network (SIPRNET) Joint Worldwide Intelligence Communications System (JWICS), Defense Switched Network (DSN) and video-link capabilities. The project will include all associated utilities and communication requirements. <u>CURRENT SITUATION:</u> In FY14 the installation lost its 24-PAA F-16 mission and began conversion to an AOG/Cyber Network Warfare Squadron as well as a Remotely Piloted Aircraft (RPA), and an Intelligence Targeting Group. The installation is configured to support fighter aircraft and requires significant work to convert the installation to the security and operational support needed for the new missions. Facility conversion for RPA/MCE and Intelligence Targeting Group will be accomplished in

<p>a different project. A design study has identified building 430 as the most suitable location for this new mission.</p> <p>IMPACT IF NOT PROVIDED: Unable to reach Full Operational Capability. Loss of capability for the Air Force and accept risk to Air Force AOG/CYBER mission. Forced use of existing facilities without appropriate conversion/reconfiguration would not accommodate mission requirements and would result in risk of operational security/breach due to attempts to perform a mission in inadequate facilities. The AOG mission requires the ability to support national contingencies or international efforts and inadequate facilities and infrastructure would curtail the ability of the unit to perform. The high level of connectivity and communication required to operate will not be available and temporary operations could compromise important information. High cost in communications requirements and special infrastructure make it prudent to install this unit in a properly located and properly configured facility.</p> <p>ADDITIONAL: An economic analysis is being prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Antiterrorism/Force Protection requirements have been considered in the development of this project. Sustainable principles, to include Life Cycle cost effective practices, will be integrated into the design, development and construction of the project in accordance with Energy Policy Act of 2005 (EPA05), Executive Order 13423, 10 USC 2802(c) and other applicable laws and Executive Orders. This project meets the criteria/scope specified in Air National Guard Handbook 32-1084, "Facility Requirements" and is in compliance with the base master plan. Mission requirements, operational considerations and location are incompatible with use by other components.</p> <table data-bbox="235 1176 1412 1249"> <thead> <tr> <th>CatCode</th> <th>Requirement</th> <th>Adequate</th> <th>Substandard</th> </tr> </thead> <tbody> <tr> <td>141-454 AOG BEDDOWN</td> <td>1,765 SM</td> <td>0 SM</td> <td>0 SM</td> </tr> </tbody> </table> <p>CONVERT BUILDING 430 FOR AOG BEDDOWN1,765 SM = 19,000 SF</p>			CatCode	Requirement	Adequate	Substandard	141-454 AOG BEDDOWN	1,765 SM	0 SM	0 SM

10. Description of Proposed Construction: Construct a Range Control Support administration and Pest Management facility utilizing conventional design and construction methods to accommodate the mission of the facility. Facilities will be designed as permanent construction in accordance with the DoD Unified Facilities Criteria (UFC) 1-200-01, General Building Requirements and UFC 1-200-02, High Performance and Sustainable Building Requirements. Facilities should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. This project will comply with DoD antiterrorism/force protection requirements per unified facilities criteria. Special Construction Requirements: Interior building systems shall include an open floor plan. Exterior work includes: extending existing utilities, communications, and road access to facility, new fencing and gates. Additional supporting infrastructure includes: intrusion detection, and centralized communications system. Air Conditioning: 123 KW.					
11. REQUIREMENT: 632 SM ADEQUATE: 0 SM SUBSTANDARD: 400 SM <u>PROJECT:</u> Range Training Support Facilities (Current Mission) <u>REQUIREMENT:</u> The Smoky Hill Air National Guard Range complex is a large and diverse range used extensively by the total force. The range requires adequately sized, properly configured, and properly located facilities to support many critical missions. New construction will maximize sharing of workspaces and building systems. New space will house Range Control House administration and operations functions and Pest Management control functions. <u>CURRENT SITUATION:</u> The facility to be replaced is a pre-engineered metal building built in 1959. Building configuration and condition does not meet the needs of the range mission to properly train air crews, Ground Forward Air Controllers (GFAC), and other joint training components. Foundation is badly cracked, chipped, and has frost-heave problems. The buildings do not meet requirements and there are many leaks. Electrical and mechanical systems are severely undersized and at end of service life, extremely inefficient and do not properly heat and cool the facilities. Facility does not meet sustainable design requirements or AT/FP requirements. The proposed construction will allow the partial demolition of building 6001 as well as adjacent site elements and utilities under a separate project. New construction will replace an inadequate facility and provide space for range control administration/operations and pest management functions.

10. Description of Proposed Construction: Construct a fighter aircraft squadron operations facility utilizing conventional design and construction methods to accommodate the mission of the facility. The facility will be designed as permanent construction in accordance with the DoD Unified Facilities Criteria (UFC) 1-200-01 and UFC 1-200-02. The facility should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. This project will comply with DoD antiterrorism/force protection requirements per unified facilities criteria. Special Construction Requirements: Sensitive Compartmentalized Information Facility (SCIF) area included for portions of squadron operations area and simulator area. Demolish 2 facilities. Air Conditioning: 420 KW.					
11. REQUIREMENT: 2,313 SM ADEQUATE: 0 SM SUBSTANDARD: 2,507 SM PROJECT: Replace Squadron Operations Facility (Current Mission). REQUIREMENT: The base requires properly sited, correctly sized and configured squadron operations facility in support of the 18 PAA F-15 aircraft assigned to the 159th Fighter Wing and the Air Control Alert (ACA) mission. The functional areas include command, administration and support offices, classroom, break area, briefing rooms, assembly areas, vaults, secure areas, and storage. Base Operations and Command Post functions will also be included. The Petroleum, Oils and Lubricant (POL) operations facility and refueling vehicle parking are in the way of construction and will need to be replicated elsewhere. A portion of the squadron operations area will need to be a secure area constructed to meet security requirements (SCIF). CURRENT SITUATION: The squadron operations function is located in building 285. It was constructed in 1968 and is beyond its useful life and is uneconomical to repair and upgrade. The building is short 25% of the minimum authorized space. Renovation and expansion of the existing facility is not cost effective and cannot be done due to site constraints. The electrical and mechanical systems do not meet current health and safety codes. The heating and air conditioning systems and the

3. INSTALLATION AND LOCATION NEW ORLEANS, LOUISIANA																							
5. PROJECT TITLE REPLACE SQUADRON OPERATIONS FACILITY	7. PROJECT NUMBER RQLH079073																						
<p>building envelope are not energy efficient. The interior building layout is not configured to support F-15 weapon systems. The vault and secure areas are too small. The facility is not a quality work and training area. POL operations (building 142) and the refueling vehicle parking mission are in the footprint of this MILCON. These two functions will be relocated elsewhere on base through this MILCON. Additionally, upon completion of this project, building 285, the current Squadron Operations facility will be demolished.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Accept risk to training and ACA operations due to inadequate facility configuration. The squadron operations mission continues to lose valuable training time due to inadequate and poorly configured space. The health and safety code violations cannot be eliminated. Facility operating costs continue to rise. Base AT/FP requirements cannot be met. The installation development plan cannot be implemented.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Air Nation Guard Handbook 32-1084, "Facility Requirements" and is in compliance with the base master plan. This new facility is an "inhabited" building and meets the standoff distance requirements. There is minimal threat and the level of protection is low, so minimum construction standards have been applied. This facility can be used by other components on an "as available" basis; however, the scope of the project is based on Air National Guard requirements. An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. As a result of this project building 142 at 111 SM (1,200 SF) and building 285 at 1,736SM (18,690SF) will be demolished. Design and construction are to be executed by the United States Navy. Sustainable principles, to include Life Cycle cost effective practices, will be integrated into the design, development and construction of the project in accordance with Executive Order 13423, 10 USC 2802(c) and other applicable laws and Executive Orders.</p>

10. Description of Proposed Construction: Add to and alter a Fire/Crash rescue station facility utilizing conventional design and construction methods to accommodate the mission of the facility. Facility shall be designed as permanent construction in accordance with the DoD Unified Facilities Criteria. The facility should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. This project will comply with DoD antiterrorism/force protection requirements per unified facilities criteria including new fencing and controlled access for building perimeter. Work on existing structure will include HVAC renovation and roof replacement. Exterior work includes; replace pavements, utility support, site improvements, and passive force protection. Air Conditioning: 263 KW.				
11. REQUIREMENT: 1,765 SM ADEQUATE: 0 SM SUBSTANDARD: 743 SM <u>PROJECT:</u> Add To and Alter Fire Station. (Current Mission) <u>REQUIREMENT:</u> The Fire Crash/Rescue Station is required to house all assigned fire apparatus, personnel and mobility gear to support the 8-PAA KC-135 aircraft training and operational missions. ANG provides 24-hour aircraft rescue firefighting support to the air refueling wing, as well as civilian passenger and cargo aircraft and an Army National Guard (ARNG) Aviation unit. The station must be properly sized and configured to support the training mission of the ANG and accommodate the requirements of the full time state employees. Functional areas include: apparatus bays, control/alarm room, office areas, training room, dining room, kitchen, physical fitness area, technical services area, equipment maintenance area, decontamination area, bunkrooms, and storage. <u>CURRENT SITUATION:</u> The existing station is not properly sized to support the 41 full-time state employees, 27 traditional guard members and their required gear. When the station was constructed the state employees were required to also retain National Guard membership, however this is no longer

3. INSTALLATION AND LOCATION BANGOR INTERNATIONAL AIRPORT, MAINE			
5. PROJECT TITLE ADD TO AND ALTER FIRE CRASH/RESCUE STATION	7. PROJECT NUMBER FKNN059220		
<p>required and only 14 are in both. There is not adequate room for dining, training, personal protective equipment lockers, mobility storage, apparatus storage and equipment maintenance. Currently mobility gear, extra personal protective equipment, confined space entry equipment trailer, hazardous material response trailer, fire fighting foam trailer and fire extinguishers must be stored in other locations on the installation. This poses a significant fire fighting limitation if this equipment is required during an emergency. The existing vehicle parking area is outside of the controlled perimeter and presents a security/force protection risk.</p> <p><u>IMPACT IF NOT PROVIDED:</u> High risk to assigned and transient aircraft due to inadequate firefighting support will continue. Lack of space continues to degrade mission critical operations, training, equipment maintenance and mobility storage. The space shortfall hinders the department's ability to train, manage personnel and equipment as well as subjecting firefighters to substandard living conditions. Security risks will persist, due to uncontrolled access to the adjacent parking area.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in ANGH 32-1084, "Facility Requirements" and is in compliance with the base master plan. All known alternatives/options were considered during the development of this project. An economic analysis has been performed, and it has been determined that an add/alter alternative is most feasible and recommended.</p> <p>Antiterrorism/Force Protection requirements have been considered in the development of this project. This facility can be used by other components on an "as available" basis; however, the scope of the project is based on Air National Guard requirements. Project will incorporate Leadership in Energy and Environmental Design (LEED) and sustainable development concepts, so as to achieve optimum resource efficiency, constructability, sustainability, and energy conservation, while minimizing adverse impacts to the built and natural environments through all phases of its life cycle. This may result in primary facility costs exceeding DoD costing standards, but the initial investment in higher acquisition cost will be rewarded with lower life cycle costs. This is consistent with the requirements of the Energy Policy Act of 2005 (EPAct05) and Executive Order 13423.</p>

10. Description of Proposed Construction: Construct an addition to and reconfigure existing flight simulator building utilizing conventional design and construction methods to accommodate the mission of the facility. Facilities will be designed as permanent construction in accordance with the DoD Unified Facilities Criteria (UFC) 1-200-01. The facility should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. This project will comply with DoD antiterrorism/force protection requirements per unified facilities criteria. Special construction requirements: Add/alter secure open storage space. Repair supporting utilities, infrastructure, pavements and add space for larger flight simulator to be installed. Air Conditioning: 525 KW.				
11. REQUIREMENT: As Required. <u>PROJECT:</u> KC-46A Add/Alter Flight Simulator Building 156 (New Mission) <u>REQUIREMENT:</u> An adequate facility properly sized and configured to house the KC-46A flight simulators. The AF has designated Pease, NH as an operational base for the first Air National Guard KC-46A tanker aircraft squadron beddown. The first aircraft are expected to be delivered in the first quarter of FY18. The flight simulators will allow training requirements to be fully met. Facility requires classified open storage in the simulator bays and associated computer and communications equipment and the briefing rooms. The facility should be operational prior to delivery of the first aircraft. <u>CURRENT SITUATION:</u> The KC-46A is a new aircraft replacing the KC-135. Existing KC-135 facilities cannot effectively fully enclose this new weapons system trainer due to its larger size and secure operating requirements. These facilities are undersized, lack the new required security controls, and are at full capacity supporting the existing simulator. <u>IMPACT IF NOT PROVIDED:</u> Without this facility the unit won't be able to provide required and essential flight simulator based training for the new KC-46A aircraft. The lack of adequate and secure flight simulator facilities increase the potential for significant degradation of mission readiness and performance. There are no other facilities or cost-effective workarounds available to accommodate this requirement to support the new mission. <u>ADDITIONAL:</u> This project meets the criteria/scope specified in Air Force Handbook 32-1084 "Facility Requirements" and the KC-46A Facility Requirements Plan. All known alternatives/options

10. Description of Proposed Construction: Construct a 2-bay fuel cell and corrosion control facility utilizing conventional design and construction methods to accommodate the mission of the facility. Facility shall be designed as permanent construction in accordance with the DoD Unified Facilities Criteria. The facility should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. This project will comply with DoD antiterrorism/force protection requirements per unified facilities criteria. Specail construction requirements: Exterior work includes access pavements, utilities, fire protection utility and communications support. Air Conditioning: 70 KW.					
11. REQUIREMENT: 1,960 SM ADEQUATE: 0 SM SUBSTANDARD: 586 SM PROJECT: Replace Fuel Cell and Corrosion Control Hangar (Current Mission) REQUIREMENT: The 177th Fighter Wing (FW) requires adequately sized, appropriately located, and properly configured facilities to perform environmentally safe fuel cell maintenance and corrosion control maintenance in accordance with AFOSH and OSHA requirements. The Fuel Cell Maintenance Dock provides covered, protected areas for fuel systems maintenance. Proper heating, electrical, plumbing, compressed air systems, mechanical ventilation, fume sensing/alarm systems, fire extinguishing and wash-down drains are required in this facility. The Corrosion Control Hangar provides an environmentally controlled area to wash aircraft as well as hangar space for corrosion treatment and repair. Corrosion Control Shops are required for paint preparation, drying, abrasive blasting, mixing, and applying paint. Related administrative areas are required to support both fuel cell maintenance and corrosion control personnel. A separate environmentally-controlled building is required to safely store the blast media, cleaning supplies, tools, and stripping materials. A small but separate storage location is required to store hydrazine system maintenance materials, tools and equipment.					

1. COMPONENT ANG	FY 2016 MILITARY CONSTRUCTION PROJECT DATA (computer generated)	2. DATE February 2015												
3. INSTALLATION AND LOCATION ATLANTIC CITY INTERNATIONAL AIRPORT, NEW JERSEY														
5. PROJECT TITLE FUEL CELL AND CORROSION CONTROL HANGAR AND SHOPS	7. PROJECT NUMBER AQRC059093													
<p><u>CURRENT SITUATION</u>: The current Fuel Cell Maintenance function is housed in building 242 at 578 SM, while the installation requires 790 SM (a 25 percent shortfall). This facility was originally designed as an F-16 corrosion control maintenance facility and is poorly configured with mechanical ventilation that cannot meet the environmental and occupation health/safety requirements of fuel cell maintenance and assigned personnel. The Corrosion Control Maintenance Facility (building 441) is also undersized, currently at 519 SM while requiring 790 SM (a 35 percent shortfall). Building 441 is a 2,196 SM facility which includes other maintenance shops which are also undersized. Relocating the fuel cell from building 441 will allow the remaining maintenance shops to be right sized and use space more efficiently. The potential site requires higher than standard supporting facility costs due to a lengthy utility run to support the High Expansion Foam fire suppression system; the repair of surrounding pavements; increased electrical utility requirements; and drainage adjustments.</p> <p><u>IMPACT IF NOT PROVIDED</u>: Increased aircraft maintenance time would be needed to perform corrosion control and fuel cell maintenance capability in ill-suited facilities. Decreased aircraft availability and corresponding aircrew training would also result. Accept risk to maintenance personnel through performing critical maintenance tasks in inadequate and undersized spaces. Required training as well as mission accomplishment will be increasingly adversely impacted resulting in missed performance requirements and ultimately reduced mission attainment.</p> <p><u>ADDITIONAL</u>: This project meets the criteria/scope specified in ANG Handbook 32-1084, "Facility Requirements" and is in compliance with the base master plan. Antiterrorism/Force Protection requirements have been considered in the development of this project. This facility can be used by other components on an "as available" basis; however, the scope of the project is based on Air National Guard requirements. Sustainable principles, to include Life Cycle cost effective practices, will be integrated into the design, development and construction of the project in accordance with Executive Order 13423, 10 USC 2802(c) and other applicable laws and Executive Orders. An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the cost efficient over the life of the project. Upon completion of this project, building 242 (586 SM) will be demolished or re-purposed.</p> <table border="0" data-bbox="235 1444 1412 1543"> <thead> <tr> <th>CatCode</th> <th>Requirement</th> <th>Adequate</th> <th>Substandard</th> </tr> </thead> <tbody> <tr> <td>211-179 FUEL SYSTEM MAINTENANCE DOCK</td> <td>836 SM</td> <td>0 SM</td> <td>586 SM</td> </tr> <tr> <td>211-159 AIRCRAFT CORROSION CONTROL</td> <td>1,124 SM</td> <td>0 SM</td> <td>0 SM</td> </tr> </tbody> </table> <p>FUEL CELL HANGAR & SHOP AREA 836 SM = 9,000 SF CORROSION CONTROL HANGAR AND SHOP AREA 1,124 SM = 12,100 SF</p>			CatCode	Requirement	Adequate	Substandard	211-179 FUEL SYSTEM MAINTENANCE DOCK	836 SM	0 SM	586 SM	211-159 AIRCRAFT CORROSION CONTROL	1,124 SM	0 SM	0 SM

5. PROJECT TITLE REMOTELY PILOTED AIRCRAFT BEDDOWN, BUILDING 912	7. PROJECT NUMBER RVKQ139005																										
<p>Sensitive Compartmentalized Information Facility (SCIF) construction. The complex requires robust and redundant communications support with connectivity to two communications switches. Communications requirements include NPRNET, SIPRNET, JWICS, DSN, and video-link capabilities. Rearrange and extend interior walls and utilities. Provide raised floor systems. Provide space for simulator bays. Provide alarm systems. Provide standby power with user-provided uninterruptible power capability if existing capability insufficient. Exterior work includes: utility support, pavements, site improvements, fire protection, and antiterrorism force protection measures and redundant communication support. Provide fire protection. Install utility metering and connect to Direct Digital Control System.</p> <p><u>CURRENT SITUATION</u>: The squadron operations facility is presently configured for C-130 operations. The unit is converting to the MQ-9 Reaper Remotely Piloted Aircraft weapons system and operations center. The current squadron operations facility is ideally suited and located to host the Reaper mission but must have existing footprint converted and additional space provided to support the function. The Reaper SOC functions require dedicated space to control multiple independent orbits/missions. Ground Control Stations provide critical linkage to direct/control the airborne MQ-9 platforms. This project converts the current squadron operations facility into a fully-mission-capable Reaper SOC, GCS, squadron operations, flight training, and communications maintenance facility within one building. This efficiently reuses an existing facility, provides synergy for an operational unit, and increases security by having all operational Reaper functions under one roof.</p> <p><u>IMPACT IF NOT PROVIDED</u>: No other existing facility can accommodate the mission or adequately suited/sited to the mission. Without this facility work, MQ-9 flight operations could not commence from this installation. Inadequate, poorly-configured, and ill-equipped spaces would cause forced use of existing facilities that would not accommodate mission requirements and would result in failure to securely conduct flight operations due to the high sensitivity of this mission. The ROC and GCS functions would be located remotely from other operational functions resulting in extreme inefficiency and delayed planning and execution of the missions. Risk to intelligence gathering and exploitation activities would be beyond acceptability. MQ-9 mission stand up would not be possible without temporary facilities at a higher operational cost to house legacy flight operations.</p> <p><u>ADDITIONAL</u>: An economic analysis is being prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Preliminary analysis shows that the selected course of action is the most efficient life-cycle option. Building 902 will be used as swing space while work on Building 912 is undertaken. This project meets the criteria/scope specified in Air National Guard Handbook 32-1084, "Facility Requirements" and is in compliance with the base master plan. Antiterrorism/Force Protection requirements have been considered in the development of this project. Sustainable principles, to include Life Cycle cost effective practices, will be integrated into the design, development and construction of the project in accordance with Executive Order 13423, 10 USC 2802(c) and other applicable laws and Executive Orders.</p>

10. Description of Proposed Construction: Construct a C-130 Squadron Operations facility utilizing conventional design and construction methods to accommodate the mission of the facility. Facilities will be designed as permanent construction in accordance with the DoD Unified Facilities Criteria (UFC) 1-200-01, General Building Requirements and UFC 1-200-02, High Performance and Sustainable Building Requirements. The facility should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. This project will comply with DoD antiterrorism/force protection requirements per unified facilities criteria. Special Construction Requirements: Exterior work includes: utilities, pavements, communications support, fire protection support and site improvements. Demolish building 3 which is in the footprint of construction. Provide temporary facilities incident to construction for existing squadron operations functions. Air Conditioning: 350 KW.				
11. REQUIREMENT: 2,573 SM ADEQUATE: 0 SM SUBSTANDARD: 1,894 SM PROJECT: Replace Squadron Operations Facility (Current Mission) REQUIREMENT: The Wing requires adequate space to conduct operations planning, administration, training and survival equipment support for a 10 PAA, C-130H mission. This includes planning, briefing, administration and critique of combat crews as well as, Command Post, Base Operations, Airfield Management, Life Support and Survival Equipment. Adequate functional areas need to include weapons and tactics, briefing and de-briefing, air advisor, flying safety, standardization and evaluation, flight planning, personal protective equipment storage, flight records, life support, scheduling, general training and group or wing operations. In addition, secure space is required for Intelligence and Command Post in order to store and process classified information. Adequate HVAC, communications and utilities need to support this facility to include mission essential power. Aircrew locker space is necessary to store personal flight gear. Life Support requires space to manage, prepare, and maintain large amounts of life support equipment to include mobility equipment and reserves. This				

1. COMPONENT ANG	FY 2016 MILITARY CONSTRUCTION PROJECT DATA (computer generated)	2. DATE February 2015																				
3. INSTALLATION AND LOCATION CHARLOTTE/DOUGLAS INTERNATIONAL AIRPORT, NORTH CAROLINA																						
5. PROJECT TITLE REPLACE C-130 SQUADRON OPERATIONS FACILITY	7. PROJECT NUMBER FJRP089066																					
<p>high-value flight gear must be stored in environmentally controlled, secure space to ensure system integrity and mission ready status.</p> <p><u>CURRENT SITUATION:</u> The existing facility (building 3) is small and cramped for the operations and flight crew work areas. Overall, functional space is 82% of requirement but the rigid facility configuration further reduces useful space. The Life Support section is in the basement, sharing space with the Survival Equipment Shop. Both of these shops are extremely crowded with insufficient work space, inadequate storage space, and inadequate ventilation to meet OSHA standards. When Survival Equipment inflates a life raft for repair, the entire shop is used causing greater safety concerns. Life Support equipment is spread throughout four locations on base creating accountability and maintenance issues. Intelligence and mission planning are undersized to meet mission needs often making the personnel load to space unbearable under the current HVAC design. The size of the female locker room is not adequate. Female aircrew members must store their equipment in their office or personal vehicles. Base Operations is 40% undersized to meet current mission loads. Fire Suppression systems are inadequate by current standards. Existing communications inside and outside plants are at maximum capacity. HVAC system is undersized for occupant loading and at the end of its life-cycle. Existing cockpit familiarization training and aircrew readiness trainer are located in a separate facility, creating training/scheduling difficulties and functional disconnects.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The Squadron Operations continues to operate below peak efficiency. The risks due to lack of fire suppression continues. Intelligence continues to be unable to adequately process and store necessary classified material creating serious mission impact for classified mission planning, execution, and command/control. Segregated crew training continues to hamper flight crew mission readiness, eventually impacting SORTS ratings and mission capability. HVAC systems fail to maintain acceptable facility environment resulting in mission degradation. Continued investments to keep the system limping along consume an estimated 15 percent of the annual budget.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Air National Guard Handbook 32-1084, "Facility Requirements" and is in compliance with the base master plan. Antiterrorism/Force Protection requirements have been considered in the development of this project. This facility can be used by other components on an "as available" basis; however, the scope of the project is based on Air National Guard requirements. An economic analysis is being prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. The following building will be demolished as a result of this project: Building 3, at 1,894 SM is in the footprint of the construction and will be demolished first. During the construction period, the function will temporarily occupy vacant ARNG space which is not located on the ANG base. A small portion of the squad ops function will occupy other base facilities. Sustainable principles, to include Life Cycle cost effective practices, will be integrated into the design, development and construction of the project in accordance with Executive Order 13423, 10 USC 2802(c) and other applicable laws and Executive Orders.</p> <table border="0" data-bbox="211 1675 1412 1879"> <thead> <tr> <th>CatCode</th> <th>Requirement</th> <th>Adequate</th> <th>Substandard</th> </tr> </thead> <tbody> <tr> <td>141-753 SQUADRON OPERATIONS</td> <td>2,573 SM</td> <td>0 SM</td> <td>1,894 SM</td> </tr> <tr> <td>DEMOLITION/ASBESTOS REMOVAL</td> <td>1,894 SM = 20,388 SF</td> <td></td> <td></td> </tr> <tr> <td>TEMPORARY FACILITIES</td> <td>929 SM = 10,000 SF</td> <td></td> <td></td> </tr> <tr> <td>OPERATIONS AREA</td> <td>2,573 SM = 27,700 SF</td> <td></td> <td></td> </tr> </tbody> </table>			CatCode	Requirement	Adequate	Substandard	141-753 SQUADRON OPERATIONS	2,573 SM	0 SM	1,894 SM	DEMOLITION/ASBESTOS REMOVAL	1,894 SM = 20,388 SF			TEMPORARY FACILITIES	929 SM = 10,000 SF			OPERATIONS AREA	2,573 SM = 27,700 SF

10. Description of Proposed Construction: Construct an Intel Targeting facility utilizing conventional design and construction methods to accommodate the mission of the facility. The facility will be designed as permanent construction in accordance with the DoD Unified Facilities Criteria (UFC) 1-200-01 and UFC 1-200-02. The facility should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. This project will comply with DoD antiterrorism/force protection requirements per unified facilities criteria. Special Construction Requirements: Sensitive Compartmentalized Information Facility (SCIF). Air Conditioning: 350 KW.					
11. REQUIREMENT: 1,765 SM ADEQUATE: 0 SM SUBSTANDARD: 0 SM PROJECT: Intel Targeting Facility (New Mission) REQUIREMENT: The installation requires adequately sized and configured space in support of a new Target Intelligence group and squadrons for a total of 206 personnel. The mission of the Target Intelligence group will be Intel support to Cyber. CURRENT SITUATION: The FY13 National Defense Authorization Act supported the President's Budget request to remove the C-27 mission from Hector International Airport. A planned Intel Targeting unit is replacing the C-27 mission. The installation is to retain the Remotely Piloted Aircraft (RPA) mission and this new mission. The Intel mission will have an additive training function to provide follow-on targeting training after technical school for all ANG intelligence personnel. There are no vacant facilities that can house the new Intel mission. IMPACT IF NOT PROVIDED: Unable to reach Full Operational Capability. Loss of targeting capability for the Air Force. Accept risk to AF targeting mission without this capability; alternatively accept risk of breach/unauthorized release of sensitive/classified information due to attempts to perform a mission in inadequate facilities. ADDITIONAL: An economic analysis is being prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. This project meets the criteria/scope

10. Description of Proposed Construction: Reconfigure and convert existing hanger and maintenance space utilizing conventional design and construction methods to accommodate the mission of the facility. The facility will be designed as permanent construction in accordance with the DoD Unified Facilities Criteria (UFC) 1-200-01 and UFC 1-200-02. The facility should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. The project will comply with DoD antiterrorism/force protection requirements per unified facilities criteria. Special Construction Requirements: install building and hangar fire suppression and support infrastructure, repair hangar doors, and upgrade communications infrastructure. Convert aircraft maintenance shop space to Aeromedical Evacuation Squadron (AES)/administrative space. Air Conditioning: 175 KW.					
11. REQUIREMENT: 5,500 SM ADEQUATE: 0 SM SUBSTANDARD: 5,508 SM PROJECT: Medium Altitude Manned ISR Beddown (New Mission). REQUIREMENT: The base requires adequately sized and properly configured Aeromedical Evacuation Squadron and aircraft maintenance facilities to reach full operating capability (FOC) for the beddown of a Medium Altitude Manned ISR mission. The mission of Medium Altitude Manned ISR is to train and deploy to provide direct ISR capability to ground forces. This Medium Altitude Manned ISR mission will support joint US Forces and other government agencies. CURRENT SITUATION: Current facilities are available for aircraft maintenance hangar and shops but are not adequate. Building 1011 is a former C-130 maintenance hangar and shops but has a Risk Assessment Code (RAC) II/ Fire Safety Deficiency (FSD) 1 rating for hangar space fire suppression. This severely limits the ability to use this space to accommodate the aircraft being assigned for the new ISR mission. Building 1011 has not had any major renovations since it was constructed in 1960. The aircraft, equipment, and personnel are scheduled to arrive in 2014. Short-term work-arounds will allow some aircraft maintenance to be conducted in other locations and on the aircraft parking apron. Space will be converted from general purpose shops and aircraft maintenance unit space to Aeromedical					

1. COMPONENT ANG	FY 2016 MILITARY CONSTRUCTION PROJECT DATA (computer generated)	2. DATE February 2015																																							
3. INSTALLATION AND LOCATION WILL ROGERS WORLD AIRPORT, OKLAHOMA																																									
5. PROJECT TITLE MEDIUM ALTITUDE MANNED ISR BEDDOWN	7. PROJECT NUMBER YZEU139006																																								
<p>Evacuation Squadron (AES) operations, changing the functional use. AES must move from their current facility as the new mission squadron operations functions must occupy that facility. Space in bldg 1011, currently occupied by the ARNG, will vacate to allow AES to move into the building.</p> <p>IMPACT IF NOT PROVIDED: The Medium Altitude Manned ISR mission will not be able to perform the required FOC mission. Lack of fire suppression will present a severe risk of loss for aircraft and mission assets and will likely prevent use of hangar for covered maintenance. Degraded and improperly configured hangar and maintenance space and necessary work-arounds will delay availability of aircraft for missions (operational and training). Degraded and improperly configured AES space will directly impact the ability of AES to meet training requirements and perform their medical evacuation mission.</p> <p>ADDITIONAL: This project meets the criteria/scope specified in Air National Guard Handbook 32-1084, Facility Requirements, and is in compliance with the base master plan. These facilities can be used by other components on an "as available" basis; however, the scope of the project is based on Air National Guard requirements. Antiterrorism/Force Protection requirements have been considered in the development of this project. An economic analysis is being prepared comparing the alternatives of new construction, revitalization, and status quo operation. Project will incorporate Leadership in Energy and Environmental Design (LEED) and sustainable development concepts, so as to achieve optimum resource efficiency, constructability, sustainability, and energy conservation, while minimizing adverse impacts to the built and natural environments through all phases of its life cycle. This may result in primary facility costs exceeding DoD costing standards, but the initial investment in higher acquisition cost will be rewarded with lower life cycle costs. This is consistent with the requirements of the Energy Policy Act of 2005 (EPA05), 10 USC 2802, Executive Order 13423, and other applicable laws and Executive Orders. AES must move out of their current facility as Squad Ops will be inhabiting that facility. Space in bldg. 1011, currently occupied by the ARNG, will vacate to allow AES to move into building 1011.</p> <table border="1" data-bbox="235 1344 1412 1617"> <thead> <tr> <th>CatCode</th> <th>Requirement</th> <th>Adequate</th> <th>Substandard</th> </tr> </thead> <tbody> <tr> <td>211-152</td> <td>ARCRAFT GENERAL PURPOSE (GP) SH</td> <td>1,133 SM</td> <td>0 SM</td> <td>1,134 SM</td> </tr> <tr> <td>211-111</td> <td>AIRCRAFT MAINTENANCE HANGAR</td> <td>1,208 SM</td> <td>0 SM</td> <td>1,208 SM</td> </tr> <tr> <td>171-449</td> <td>RES FORCES A-E TRAINING</td> <td>1,198 SM</td> <td>0 SM</td> <td>1,206 SM</td> </tr> <tr> <td>211-153</td> <td>NON-DESTRUCTIVE INSPECTION (ND)</td> <td>372 SM</td> <td>0 SM</td> <td>372 SM</td> </tr> <tr> <td>211-154</td> <td>AIRCRAFT ORG MAINT (AMU) SHOP</td> <td>753 SM</td> <td>0 SM</td> <td>753 SM</td> </tr> <tr> <td>217-712</td> <td>AVIONICS SHOP</td> <td>186 SM</td> <td>0 SM</td> <td>186 SM</td> </tr> <tr> <td>610-129</td> <td>WEAPON SYS MAINT MGMT (WSMM)</td> <td>650 SM</td> <td>0 SM</td> <td>650 SM</td> </tr> </tbody> </table> <p>AIRCRAFT MAINTENANCE HANGAR (211111)1,208 SM = 13,003 SF AMU AND AIRCRAFT MAINTENANCE SHOPS (211152)2,444 SM = 26,307 SF WEAPON SYSTEM MAINTENANCE MGT (610129)650 SM = 6,997 SF CONVERT AEROMED AND SUPPORT SPACE (171449)1,206 SM = 12,981 SF</p>			CatCode	Requirement	Adequate	Substandard	211-152	ARCRAFT GENERAL PURPOSE (GP) SH	1,133 SM	0 SM	1,134 SM	211-111	AIRCRAFT MAINTENANCE HANGAR	1,208 SM	0 SM	1,208 SM	171-449	RES FORCES A-E TRAINING	1,198 SM	0 SM	1,206 SM	211-153	NON-DESTRUCTIVE INSPECTION (ND)	372 SM	0 SM	372 SM	211-154	AIRCRAFT ORG MAINT (AMU) SHOP	753 SM	0 SM	753 SM	217-712	AVIONICS SHOP	186 SM	0 SM	186 SM	610-129	WEAPON SYS MAINT MGMT (WSMM)	650 SM	0 SM	650 SM

10. Description of Proposed Construction: Construct an Air National Guard crash fire rescue station utilizing conventional design and construction methods to accommodate the mission of the facility. Facility shall be designed as permanent construction in accordance with the DoD Unified Facilities Criteria. The facility should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. This project will comply with DoD antiterrorism/force protection requirements per unified facilities criteria. Exterior work includes: access pavements, utilities, fire protection and communications support. Provide connections for backup power with generator for critical areas. Air Conditioning: 175 KW.				
11. REQUIREMENT: 1,617 SM ADEQUATE: 0 SM SUBSTANDARD: 894 SM PROJECT: Replace Fire Station (Current Mission). REQUIREMENT: The 173 FW requires an adequately sized and properly configured crash fire rescue station supporting the Air Force's only remaining F-15 Formal Training Unit operating 21-PAA F-15 aircraft with an active associate training cadre. The facility will be designed to meet the requirements of a 25-person, 3 shift, and primary response station. Functional areas include command center, vehicle bays, bunk rooms, storage, kitchenette, and training areas. By agreement with the airport authority and the FAA, the ANG provides primary crash and fire rescue response to the military and commercial aviation. CURRENT SITUATION: The 173rd Fire Department is the primary fire crash rescue department for the entire airport. The 25-person department has 3 shifts of 7 firefighters each plus the Fire Chief and staff. The facility has 58% of required space. There are 8 primary response vehicles. The current facility lacks adequate space for firefighter equipment storage, sleeping quarters, administration, firefighter training, maintenance, personal protective clothing storage, fire extinguishing agent storage, and vehicle parking. Firefighter protective clothing and equipment is currently stored on racks in the vehicle bays. This causes a safety hazard when firefighters are called to respond to an emergency. Sleeping quarters are cramped and poorly ventilated. Administration space is inadequate for the 4 assigned people. The current facility lacks several key components: a bio-hazard clean up room to clean equipment after medical incidents, a clean room to service Self Contained Breathing Apparatus

<p>equipment, a hose storage and drying area, protective clothing laundry and disinfecting area, and a controlled area for medical supplies.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Accept risk to flight safety and the flying public due to inadequate fire station. Fire department personnel continue to work in an unsafe environment. Their effectiveness in responding to emergencies will continue to be hampered by inadequate facilities. Deficient interior space and configuration, cramped conditions and insufficient office, training, storage, and sleeping areas will impede the training of firefighters and threaten the department's ability to meet mission requirements.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Air National Guard Handbook 32-1084, "Facility Requirements" and is in compliance with the base master plan. Antiterrorism/Force Protection requirements have been considered in the development of this project. This facility can be used by other components on an "as available" basis; however, the scope of the project is based on Air National Guard requirements. The existing fire station will be converted to ASE storage under a separate project. An economic analysis is being prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Sustainable principles, to include Life Cycle cost effective practices, will be integrated into the design, development and construction of the project in accordance with Executive Order 13423, 10 USC 2802(c) and other applicable laws and Executive Orders.</p>

10. Description of Proposed Construction: Relocate two lane entry asphalt roadway and construct new entry gatehouse and inspection area utilizing conventional design and construction methods to accommodate the mission of the facility. Facilities will be designed as permanent construction in accordance with the DoD Unified Facilities Criteria (UFC) 1-200-01, General Building Requirements and UFC 1-200-02, High Performance and Sustainable Building Requirements. The facility should be compatible with applicable DoD, Air Force, and base design standards. In addition, local materials and construction techniques shall be used where cost effective. This project will comply with DoD antiterrorism/force protection requirements per unified facilities criteria. Special Construction Requirements: Install perimeter fencing and redirect utilities along new entry road path. Install vehicle barriers. Air Conditioning: 18 KW.				
11. REQUIREMENT: 177 SM ADEQUATE: 0 SM SUBSTANDARD: 19 SM PROJECT: Force Protection Measures-Relocate Coonskin Drive (Current Mission). REQUIREMENT: The 130th Airlift Wing (AW) requires a safe and properly configured roadway to allow access to the base. This requirement includes proper clearances between base facilities and community roadways. Base needs a properly configured entry to restrict access onto a federal military installation. The base supports a wing of 8-PAA C-130H aircraft. CURRENT SITUATION: Coonskin Drive is part of the State roadway system and is the only roadway allowing access to the base. The roadway is within 40 feet of several WVANG buildings including the Operations and Training Facility, Building 141. The area in which the roadway would need to be constructed is state owned property. The current primary entry to the base is located within 45 feet of "primary gathering" facilities such as the Security Forces Building and the Operations and Training facility. Several alterations, per JSIVA recommendations, have been constructed at the primary entry to help reduce the AT/FP risks associated with the current layout. Because of these alterations, there have been 7 vehicle accidents with the bollard system and 11 vehicle's tires damaged. The current configuration has also resulted in concerns for the ability of Emergency Vehicles entering/exiting the

3. INSTALLATION AND LOCATION YEAGER AIRPORT, WEST VIRGINIA															
5. PROJECT TITLE FORCE PROTECTION- RELOCATE COONSKIN ROAD	7. PROJECT NUMBER LYBH049066														
<p>base due to navigating the bollard system. Despite the modifications made, the primary entry does not meet many of the required AT/FP measures called for by the DoD, including, but not limited to: no inspection lane for either individual or commercial vehicles, no secondary barrier system, no overhead or lane protection for Security Forces personnel, and no gate to eliminate entry during higher AT/FP condition codes. The secondary entrance is used for commercial entrance of common carriers (FedEx, UPS, etc.), freight delivery, and contractor employees and supplies. The same AT/FP condition exist for this entrance including, but not limited to: no inspection lane for either individual or commercial vehicles, no secondary barrier system, no overhead or lane protection for Security Forces personnel, and no gate to eliminate entry during higher AT/FP condition codes. On scheduled drill weekends the configuration of the gates has resulted in traffic being backed up along Coonskin Drive waiting to enter the base. This backup blocks traffic traveling along Coonskin Drive and increases risk for vehicle accidents.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Existing AT/FP challenges will not be addressed if the roadway is not relocated. The risk to existing inhabited structures will remain high. While the newly installed chain-link fence is able to limit direct access to ANG property, it does not protect or limit the exposure of the adjacent building from the effects of a bomb blast. Based upon current AT/FP standards, a vehicle bomb exploding at the nearest point of the building would result in a major loss of life and destruction of property. There will be continued vehicle damage/accidents and tire damage. Steps have been taken to reduce these incidents of accidents and damage, but without correction to the main issue they will still occur. The gates will not meet many of the requirements of AT/FP and continue to place airmen, especially Security Forces Personnel, at far greater risk of injury due to an explosion.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements" and is in compliance with the base master plan. Anti-terrorism/force protection requirements have been considered in the development of this project. Sustainable principles, to include Life Cycle cost effective practices, will be integrated into the design, development and construction of the project in accordance with Executive Order 13423, 10 USC 2802(c) and other applicable laws and Executive Orders. DEPARTMENT OF THE AIR FORCE
JUSTIFICATION OF ESTIMATES FOR FISCAL YEAR 2016

APPROPRIATION: MILITARY CONSTRUCTION -- AIR NATIONAL GUARD

PROGRAM 313: PLANNING AND DESIGN \$5,104,000

PART I -- PURPOSE AND SCOPE

The funds estimated in this program are to provide financing for project planning and design of the construction requirements for the Air National Guard.

PART II -- JUSTIFICATION OF FUNDS REQUESTED

The funds required for Planning and Design will provide for establishing project construction design of the facilities and for fully evaluating each designed project in terms of technical adequacy and estimated costs.

[THIS PAGE INTENTIONALLY LEFT BLANK]

1. COMPONENT ANG	FY 2016 MILITARY CONSTRUCTION PROJECT DATA (computer generated)			2. DATE February 2015	
3. INSTALLATION AND LOCATION WORLDWIDE UNSPECIFIED LOCATIONS			4. PROJECT TITLE PLANNING AND DESIGN		
5. PROGRAM ELEMENT 52276F	6. CATEGORY CODE 961-999	7. PROJECT NUMBER PAYZ160005	8. PROJECT COST(\$000) \$5,104		
9. COST ESTIMATES					
ITEM		U/M	QUANTITY	UNIT COST	COST (\$000)
PLANNING AND DESIGN (P-313)		LS			5,104
SUBTOTAL					5,104
TOTAL CONTRACT COST					5,104
TOTAL REQUEST					5,104
10. Description of Proposed Construction: The funds requested will provide for the architectural and engineering services necessary to fully evaluate each project's technical adequacy and estimated cost, and complete final design of facilities. In addition, the funds are required to prepare working drawings, specifications, and project reports for the design of construction projects to be included in future Air National Guard (ANG) Military Construction (MILCON) Programs.					
11. REQUIREMENT: As Required <u>PROJECT:</u> Planning and Design <u>REQUIREMENT:</u> The ANG requires planning and design funds for projects that are to be included in future MILCON programs. The FY 2016 design funds are needed to complete the design for those projects that are to be included in the FY 2016 MILCON program and to begin the design for those projects to be included in the FY 2017/2018 program. Funds also provide for design of the FY 2016 unspecified minor construction program. <u>CURRENT SITUATION:</u> The ANG requires the design money in FY 2016 to ensure the design milestones for the FY 2016 and FY 2017/2018 MILCON Programs, as mandated by Department of Defense (DOD) Instruction 1225.8, are met. <u>IMPACT IF NOT PROVIDED:</u> The ANG will not be able to effectively administer future year MILCON programs. Insufficient design funds will translate into late design completion, later construction starts, higher construction costs, and the inability to meet DoD and Congressionally mandated execution rates, and degrade the operational mission and training by the delays in construction completion.					

[THIS PAGE INTENTIONALLY LEFT BLANK]

DEPARTMENT OF THE AIR FORCE
JUSTIFICATION OF ESTIMATES FOR FISCAL YEAR 2016

APPROPRIATION: MILITARY CONSTRUCTION -- AIR NATIONAL GUARD
PROGRAM 341: UNSPECIFIED MINOR CONSTRUCTION \$7,734,000

PART I -- PURPOSE AND SCOPE

The funds estimated in this program are to provide financing for new construction and alteration projects having cost estimates over \$1,000,000 but not exceeding \$3,000,000, which are not otherwise authorized by law.

PART II -- JUSTIFICATION OF FUNDS REQUESTED

The funds required for Unspecified Minor Construction will finance projects for which the urgency is such that they could not be included in the regular Military Construction Program for the Air National Guard, and such that they exceed the minor construction authorization limit in the Operation and Maintenance Appropriation.

[THIS PAGE INTENTIONALLY LEFT BLANK]

1. COMPONENT ANG	FY 2016 MILITARY CONSTRUCTION PROJECT DATA (computer generated)			2. DATE February 2015	
3. INSTALLATION AND LOCATION WORLDWIDE UNSPECIFIED LOCATIONS			4. PROJECT TITLE UNSPECIFIED MINOR CONSTRUCTION		
5. PROGRAM ELEMENT 52276F	6. CATEGORY CODE 962-999	7. PROJECT NUMBER PAYZ160006	8. PROJECT COST(\$000) \$7,734		
9. COST ESTIMATES					
ITEM		U/M	QUANTITY	UNIT COST	COST (\$000)
UNSPECIFIED MINOR CONSTRUCTION (P-341)		LS			7,734
SUBTOTAL					7,734
TOTAL CONTRACT COST					7,734
TOTAL REQUEST					7,734
10. Description of Proposed Construction: Provides funding for unspecified minor construction projects not otherwise authorized by law and having a funded cost between \$1,000,000 and \$3,000,000. Projects include construction, alteration, or conversion of permanent or temporary facilities. The Secretary of the Air Force has the authority to approve projects of this nature under the provisions of 10 U. S. Code, 18233a and 10 U. S. Code, 2805.					
11. REQUIREMENT: As Required <u>PROJECT:</u> Unspecified Minor Construction Program <u>REQUIREMENT:</u> This program provides the means of accomplishing urgent, or unforeseen projects costing over \$1,000,000, but not exceeding \$3,000,000. The project requirements are anticipated to arise during late FY 2015 or FY 2016, and would be needed to satisfy critical, urgent mission beddowns and weapon system conversions, or to meet serious and urgent health, safety, and environmental requirements. The late identification of these requirements prevents their inclusion in the FY 2016 MILCON program and the projects cannot wait for the FY 2017 program. The requested funds are not a percent of the budget, but are based on historical trends. Routine and non-urgent projects are not funded from this account. <u>CURRENT SITUATION:</u> As in the recent past, it is expected that the Air Force will continue to transfer missions and force structure into the ANG. These aircraft conversions and beddowns generate facility requirements that are often late-to-need using normal MILCON programming avenues. The urgency of the required projects is driven by the arrival of new aircraft and equipment, or the need to eliminate immediate health, safety or environmental requirements or personnel growth. <u>IMPACT IF NOT PROVIDED:</u> Unable to adequately support mission conversions and beddowns. More expensive workarounds will have to be used. Formal reprogramming is the only other option available; however, funds may not be available for these reprogramming actions.
